There have been some significant changes in this edition. The Literacy entry now includes rates for males, females, and both sexes. Appendix C: International Organizations and Groups is new and includes date established, aim, and list of members. Three maps of special interest have been added this year--republics of the Soviet Union, ethnic groups in the Soviet Union, and ethnic groups in Eastern Europe.

/Administrative divisions: The numbers, designatory terms, and first-order administrative divisions are generally those approved by the United States Board on Geographic Names (BGN). Changes that have been reported but not yet acted upon by BGN are noted.

/Area: Total area is the sum of all land and water areas delimited by international boundaries and/or coastlines. Land area is the aggregate of all surfaces delimited by international boundaries and/or coastlines, excluding inland water bodies (lakes, reservoirs, rivers). Comparative areas are based on total area equivalents. Most entities are compared with the entire US or one of the 50 states. The smaller entities are compared with Washington, DC (178 km2, 69 miles2) or
The Mall in Washington, DC (0.59 km², 0.23 miles², 146 acres).

 Birth rate: The average annual number of births during a year per 1,000 population at midyear. Also known as crude birth rate.

 Dates of information: In general, information available as of 1 January 1991 was used in the preparation of this edition. Population figures are estimates for 1 July 1991, with population growth rates estimated for mid-1991 through mid-1992. Major political events have been updated through 30 June 1991. Military age figures are average annual estimates for 1991-95.

 Death rate: The average annual number of deaths during a year per 1,000 population at midyear. Also known as crude death rate.

 Diplomatic representation: The US Government has diplomatic relations with 162 nations. There are only 144 US embassies, since some nations have US ambassadors accredited to them, but no physical US mission exists. The US has diplomatic relations with 151 of the 159 UN members--the exceptions are Angola, Belorussia (Byelorussia; constituent republic of the Soviet Union), Cambodia, Cuba, Iran, Vietnam, Ukraine (constituent republic of the Soviet Union) and, obviously, the US itself. In addition, the US has diplomatic relations with 12 nations that are not in the UN--Andorra, Federated States of Micronesia, Kiribati, Marshall Islands, Monaco, Nauru, San Marino, South Korea, Switzerland, Tonga, Tuvalu, and the Vatican City. North Korea is not in the UN and the
US does not have diplomatic relations with that nation. The US has not recognized the incorporation of Estonia, Latvia, and Lithuania into the Soviet Union and continues to accredit the diplomatic representatives of their last free governments.

_#_Disputes: This category includes a wide variety of situations that range from traditional bilateral boundary disputes to unilateral claims of one sort or another. Every international land boundary dispute in the "Guide to International Boundaries," a map published by the Department of State, is included. References to other situations may also be included that are border- or frontier-relevant, such as maritime disputes, geopolitical questions, or irredentist issues. However, inclusion does not necessarily constitute official acceptance or recognition by the US Government.

_#_Economic aid: This entry refers to bilateral commitments of:

Official Development Assistance (ODA), which is defined as government grants that (a) are administered with the promotion of economic development and welfare of LDCs as their main objective and (b) are concessional in character and contain a grant element of at least 25%; and

Other Official Flows (OOF) or transactions by the official sector whose main objective is other than development-motivated or whose grant element is below the 25% threshold for ODA. OOF transactions
include official export credits (such as Eximbank credits), official equity and portfolio investment, and debt reorganization by the official sector that does not meet concessional terms.

Aid is considered to have been committed when agreements are initialed by the parties involved and constitute a formal declaration of intent.

Entites: Some of the nations, dependent areas, areas of special sovereignty, and governments included in this publication are not independent, and others are not officially recognized by the US Government. Nation refers to a people politically organized into a sovereign state with a definite territory. Dependent area refers to a broad category of political entities that are associated in some way with a nation. Names used for page headings are usually the short-form names as approved by the US Board on Geographic Names. The long-form name is included in the Government section and an entry of "none" indicates a long-form name does not exist. In some instances, no short-form name exists--then the long-form name must serve for all usages.

There are 247 entities in the Factbook that may be categorized as follows:

NATIONS
157 UN members (there are 159 members in the UN, but only 157 are
included in The World Factbook because Belorussia
(Byelorussia) and Ukraine are constituent republics of the Soviet
Union)

Notes: The US Government has not recognized the incorporation of Estonia, Latvia, and Lithuania into the Soviet Union as constituent republics during World War II. Those Baltic states are not members of the UN and are not included in the list of nations. The US Government does not recognize the four so-called "independent" homelands of Bophuthatswana, Ciskei, Transkei, and Venda in South Africa.

_Gross domestic product (GDP): The value of all goods and
services produced domestically.

_Gross national product (GNP): The value of all goods and services produced domestically, plus income earned abroad, minus income earned by foreigners from domestic production.

_GNP/GDP methodology: In the Economy section, GNP/GDP dollar estimates for the OECD countries, the USSR, and the East European countries are derived from purchasing power parity (PPP) calculations rather than from conversions at official currency exchange rates. The PPP method normally involves the use of international dollar price weights, which are applied to the quantities of goods and services produced in a given economy. In addition to the lack of reliable data from the majority of countries, the statistician faces a major difficulty in specifying, identifying, and allowing for the quality of goods and services. The division of a PPP GNP/GDP estimate in dollars by the corresponding estimate in the local currency gives the PPP conversion rate. One thousand dollars will buy the same market basket of goods in the US as one thousand dollars, converted to the local currency at the PPP conversion rate, will buy in the other country. GNP/GDP estimates for the LDCs, on the other hand, are based on the conversion of GNP/GDP estimates in local currencies to dollars at the official currency exchange rates. One caution: the proportion of, say, defense expenditures as a percent of GNP/GDP in local currency accounts may differ substantially from the proportion when GNP/GDP accounts are expressed in PPP terms, as, for example, when an observer estimates the dollar level of Soviet or Japanese military expenditures;
similar problems exist when components are expressed in dollars under currency exchange rate procedures. Finally, as academic research moves forward on the PPP method, we hope to convert all GNP/GDP estimates to this method in future editions of the Factbook.

### Growth rate (population): The annual percent change in the population, resulting from a surplus (or deficit) of births over deaths and the balance of migrants entering and leaving a country. The rate may be positive or negative.

### Illicit drugs: There are five categories of illicit drugs—narcotics, stimulants, depressants (sedatives), hallucinogens, and cannabis. These categories include many drugs legally produced and prescribed by doctors as well as those illegally produced and sold outside medical channels.

Cannabis (Cannabis sativa) is the common hemp plant, provides hallucinogens with some sedative properties, and includes marijuana (pot, Acapulco gold, grass, reefer), tetrahydrocannabinol (THC, Marinol), hashish (hash), and hashish oil (hash oil).

Coca (Erythroxylon coca) is a bush and the leaves contain the stimulant cocaine. Coca is not to be confused with cocoa which comes from cacao seeds and is used in making chocolate, cocoa, and cocoa butter.
Cocaine is a stimulant derived from the leaves of the coca bush.

Depressants (sedatives) are drugs that reduce tension and anxiety and include chloral hydrate, barbiturates (Amytal, Nembutal, Seconal, phenobarbital), benzodiazepines (Librium, Valium), methaqualone (Quaalude), glutethimide (Doriden), and others (Equanil, Placidyl, Valmid).

Drugs are any chemical substances that effect a physical, mental, emotional, or behavioral change in an individual.

Drug abuse is the use of any licit or illicit chemical substance that results in physical, mental, emotional, or behavioral impairment in an individual.

Hallucinogens are drugs that affect sensation, thinking, self-awareness, and emotion. Hallucinogens include LSD (acid, microdot), mescaline and peyote (mexc, buttons, cactus), amphetamine variants (PMA, STP, DOB), phencyclidine (PCP, angel dust, hog), phencyclidine analogues (PCE, PCPy, TCP), and others (psilocybin, psilocyn).

Hashish is the resinous exudate of the cannabis or hemp plant (Cannabis sativa).

Heroin is a semisynthetic derivative of morphine.
Marijuana is the dried leaves of the cannabis or hemp plant (Cannabis sativa).

Narcotics are drugs that relieve pain, often induce sleep, and refer to opium, opium derivatives, and synthetic substitutes. Natural narcotics include opium (paregoric, parepectolin), morphine (MS-Contin, Roxanol), codeine (Tylenol w/codeine, Empirin w/codeine, Robitussan A-C), and thebaine. Semisynthetic narcotics include heroin (horse, smack), and hydromorphone (Dilaudid). Synthetic narcotics include meperidine or Pethidine (Demerol, Mepergan), methadone (Dolophine, Methadose), and others (Darvon, Lomotil).

Opium is the milky exudate of the incised, unripe seedpod of the opium poppy.

Opium poppy (Papaver somniferum) is the source for many natural and semisynthetic narcotics.

Poppy straw concentrate is the alkaloid derived from the mature dried opium poppy.

Qat (kat, khat) is a stimulant from the buds or leaves of Catha edulis that is chewed or drunk as tea.
Stimulants are drugs that relieve mild depression, increase energy and activity, and include cocaine (coke, snow, crack), amphetamines (Desoxyn, Dexedrine), phenmetrazine (Preludin), methylphenidate (Ritalin), and others (Cylert, Sanorex, Tenuate).

_*Infant mortality rate:* The number of deaths to infants under one year of age in a given year per 1,000 live births occurring in the same year.

_*Land use:* Human use of the land surface is categorized as arable land--land cultivated for crops that are replanted after each harvest (wheat, maize, rice); permanent crops--land cultivated for crops that are not replanted after each harvest (citrus, coffee, rubber); meadows and pastures--land permanently used for herbaceous forage crops; forest and woodland--land under dense or open stands of trees; and other--any land type not specifically mentioned above (urban areas, roads, desert). The percentage figure for irrigated refers to the portion of the entire amount of land area that is artificially supplied with water.

_*Leaders:* The chief of state is the titular leader of the country who represents the state at official and ceremonial functions but is not involved with the day-to-day activities of the government. The head of government is the administrative leader who manages the day-to-day activities of the government. In the UK, the monarch is the chief
of state and the prime minister is the head of government. In the US, the President is both the chief of state and the head of government.

---

Life expectancy at birth: The average number of years to be lived by a group of people all born in the same year, if mortality at each age remains constant in the future.

---

Literacy: There are no universal definitions and standards of literacy. Unless otherwise noted, all rates are based on the most common definition—the ability to read and write at a specified age. Detailing the standards that individual countries use to assess the ability to read and write is beyond the scope of this publication.

---

Maps: All maps will be available only in the printed version for the foreseeable future.

---

Maritime claims: The proximity of neighboring states may prevent some national claims from being fully extended.

---

Merchant marine: All ships engaged in the carriage of goods. All commercial vessels (as opposed to all nonmilitary ships), which excludes tugs, fishing vessels, offshore oil rigs, etc. Also, a grouping of merchant ships by nationality or register.

Captive register--A register of ships maintained by a territory,
possession, or colony primarily or exclusively for the use of ships owned in the parent country. Also referred to as an offshore register, the offshore equivalent of an internal register. Ships on a captive register will fly the same flag as the parent country, or a local variant of it, but will be subject to the maritime laws and taxation rules of the offshore territory. Although the nature of a captive register makes it especially desirable for ships owned in the parent country, just as in the internal register, the ships may also be owned abroad. The captive register then acts as a flag of convenience register, except that it is not the register of an independent state.

Flag of convenience register--A national register offering registration to a merchant ship not owned in the flag state. The major flags of convenience (FOC) attract ships to their register by virtue of low fees, low or nonexistent taxation of profits, and liberal Manning requirements. True FOC registers are characterized by having relatively few of the ships registered actually owned in the flag state. Thus, while virtually any flag can be used for ships under a given set of circumstances, an FOC register is one where the majority of the merchant fleet is owned abroad. It is also referred to as an open register.

Flag state--The nation in which a ship is registered and which holds legal jurisdiction over operation of the ship, whether at home or abroad. Differences in flag state maritime legislation determine how a ship is manned and taxed and whether a foreign-owned ship may be placed on the register.
Internal register--A register of ships maintained as a subset of a national register. Ships on the internal register fly the national flag and have that nationality but are subject to a separate set of maritime rules from those on the main national register. These differences usually include lower taxation of profits, manning by foreign nationals, and, usually, ownership outside the flag state (when it functions as an FOC register). The Norwegian International Ship Register and Danish International Ship Register are the most notable examples of an internal register. Both have been instrumental in stemming flight from the national flag to flags of convenience and in attracting foreign-owned ships to the Norwegian and Danish flags.

Merchant ship--A vessel that carries goods against payment of freight. Commonly used to denote any nonmilitary ship but accurately restricted to commercial vessels only.

Register--The record of a ship's ownership and nationality as listed with the maritime authorities of a country. Also, the compendium of such individual ships' registrations. Registration of a ship provides it with a nationality and makes it subject to the laws of the country in which registered (the flag state) regardless of the nationality of the ship's ultimate owner.

# Money figures: All are expressed in contemporaneous US dollars unless otherwise indicated.
Net migration rate: The balance between the number of persons entering and leaving a country during the year per 1,000 persons (based on midyear population). An excess of persons entering the country is referred to as net immigration (3.56 migrants/1,000 population); an excess of persons leaving the country as net emigration (-9.26 migrants/1,000 population).

Population: Figures are estimates from the Bureau of the Census based on statistics from population censuses, vital registration systems, or sample surveys pertaining to the recent past, and on assumptions about future trends.

Total fertility rate: The average number of children that would be born per woman if all women lived to the end of their childbearing years and bore children according to a given fertility rate at each age.

Years: All year references are for the calendar year (CY) unless indicated as fiscal year (FY).

Note: Information for the US and US dependencies was compiled from material in the public domain and does not represent Intelligence Community estimates.

The Handbook of Economic Statistics, published annually in
September by the Central Intelligence Agency, contains detailed economic information for the Organization for Economic Cooperation and Development (OECD) countries, Eastern Europe, the USSR, and selected other countries. The Handbook can be obtained wherever The World Factbook is available.

*Economy

__Overview: Fundamentally, Afghanistan is an extremely poor,

landlocked country, highly dependent on farming (wheat especially) and

livestock raising (sheep and goats). Economic considerations, however,

have played second fiddle to political and military upheavals, including

the nine-year Soviet military occupation (ended 15 February 1989) and the

continuing bloody civil war. Over the past decade, one-third of the

population has fled the country, with Pakistan sheltering about 3.3

million refugees and Iran about 1.3 million. Another 1 million have

probably moved into and around urban areas within Afghanistan. Large

numbers of bridges, buildings, and factories have been destroyed or

damaged by military action or sabotage. Government claims

to the contrary, gross domestic product almost certainly is

lower than 10 years ago because of the loss of labor and capital

and the disruption of trade and transport.

**Economy**

_Overview:_ As the poorest country in Europe, Albania's development lags behind even the least favored areas of the Yugoslav economy. For over 40 years, the Stalinist-type economy has operated on the principles of central planning and state ownership of the means of production. In recent years Albania has implemented limited economic reforms to stimulate its lagging economy, provide incentives, and decentralize decisionmaking. In an effort to expand international ties, Tirane has reestablished diplomatic relations with the Soviet Union and the US. The Albanians have also passed legislation allowing foreign investment. Albania possesses considerable mineral resources and, until 1990, was largely self-sufficient in food; several years of drought have hindered agricultural development. Numerical estimates of Albanian economic activity are subject to an especially wide margin of error because the government until recently did not release economic information.

Economy

Overview: The exploitation of oil and natural gas products forms the backbone of the economy. Algeria depends on hydrocarbons for nearly all of its export receipts, about 30% of government revenues, and nearly 25% of GDP. In 1973-74 the sharp increase in oil prices led to a booming economy and helped to finance an ambitious program of industrialization. Plunging oil and gas prices, combined with the mismanagement of Algeria's highly centralized economy, have brought the nation to its most serious social and economic crisis since independence. The government has promised far-reaching reforms, including giving public-sector companies more autonomy, encouraging private-sector activity, boosting gas and nonhydrocarbon exports, and proposing a major overhaul of the banking and financial systems, but to date has made little progress.

* Economy

**Overview:** The mainstay of Andorra's economy is tourism. An estimated 12 million tourists visit annually, attracted by Andorra's duty-free status and by its summer and winter resorts. Agricultural production is limited by a scarcity of arable land, and most food has to be imported. The principal livestock activity is sheep raising. Manufacturing consists mainly of cigarettes, cigars, and furniture. The rapid pace of European economic integration is a potential threat to Andorra's advantages from its duty-free status.

_*Economy
__Overview: Subsistence agriculture provides the main livelihood for
80 to 90% of the population, but accounts for less than 15% of GDP. Oil
production is the most lucrative sector of the economy, contributing
about 50% to GDP. In recent years, however, the impact of fighting an
internal war has severely affected the nonoil economy, and food has to be imported. For the long run, Angola has the advantage of rich natural resources, notably gold, diamonds, and arable land. To realize its economic potential Angola not only must secure domestic peace but also must reform government policies that have led to distortions and imbalances throughout the economy.

Overview: Anguilla has few natural resources, and the economy depends heavily on lobster fishing, offshore banking, tourism, and remittances from emigrants. In recent years the economy has benefited from a boom in tourism. Development is planned to improve the infrastructure, particularly transport and tourist facilities, and also light industry. Improvement in the economy has reduced unemployment from 40% in 1984 to about 5% in 1988.

Antarctica

Geography

Total area: about 14,000,000 km2; land area: about 14,000,000 km2

Comparative area: slightly less than 1.5 times the size of the US; second-smallest continent (after Australia)

Land boundaries: see entry on Disputes

Coastline: 17,968 km

Maritime claims: see entry on Disputes

Disputes: Antarctic Treaty defers claims (see Antarctic Treaty
Summary below); sections (some overlapping) claimed by Argentina, Australia, Chile, France (Adelie Land), New Zealand (Ross Dependency), Norway (Queen Maud Land), and UK; Brazil has noted possible Latin claims; the US and USSR do not recognize the territorial claims of other nations and have made no claims themselves (but reserve the right to do so); no formal claims have been made in the sector between 90o west and 150o west

__Climate:__ severe low temperatures vary with latitude, elevation, and distance from the ocean; East Antarctica colder than West Antarctica because of its higher elevation; Antarctic Peninsula has most moderate climate; warmest temperatures occur in January along the coast and average slightly below freezing

__Terrain:__ about 98% thick continental ice sheet, with average elevations between 2,000 and 4,000 meters; mountain ranges up to 4,897 meters high; ice-free coastal areas include parts of southern Victoria Land, Wilkes Land, the Antarctic Peninsula area, and Ross Island on McMurdo Sound; glaciers form ice shelves along about half of coastline and floating ice shelves constitute 11% of the area of the continent

__Natural resources:__ none presently exploited; coal and iron ore; chromium, copper, gold, nickel, platinum, and hydrocarbons have been found in small uncommercial quantities

__Land use:__ arable land 0%; permanent crops 0%; pastures 0%;
meadows and forest and woodland 0%; other 100% (ice 98%, barren rock 2%)

Environment: mostly uninhabitable; katabatic (gravity) winds blow coastward from the high interior; frequent blizzards form near the foot of the plateau; cyclonic storms form over the ocean and move clockwise around the coast, as does a circumpolar ocean current; during summer more solar radiation reaches the surface at the South Pole than is received at the Equator in an equivalent period; in April 1991 it was reported that the ozone shield, which protects the Earth's surface from harmful ultraviolet radiation, had dwindled to its lowest level ever over Antarctica; subject to active volcanism (Deception Island and isolated areas of West Antarctica); other seismic activity rare and weak

_Type: The Antarctic Treaty, signed on 1 December 1959 and entered into force on 23 June 1961, established for at least 30 years a legal framework for peaceful use, scientific research, and deferral of legal questions regarding territorial claims. Administration is carried out through consultative member meetings--the last meeting was held in Madrid (Spain) in April 1991.
Consultative (voting) members include seven nations that claim portions of Antarctica as national territory (some claims overlap) and nonclaimant nations. The US and other nations have made no claims, but have reserved the right to claim territory. The US does not recognize the claims of others. The year in parentheses indicates when an acceding nation was voted to full consultative (voting) status, while no date indicates an original 1959 treaty signatory. Claimant nations are--Argentina, Australia, Chile, France, New Zealand, Norway, and the UK. Nonclaimant consultative nations are--Belgium, Brazil (1983), China (1985), Ecuador (1990), Finland (1989), Germany (1981), India (1983), Italy (1987), Japan, South Korea (1989), Netherlands (1990), Peru (1989), Poland (1977), South Africa, Spain (1988), Sweden (1988), Uruguay (1985), the US, and the USSR.

Antarctic Treaty Summary:

Article 1--area to be used for peaceful purposes only; military activity, such as weapons testing, is prohibited, but military personnel and equipment may be used for peaceful scientific and logistics purposes;
Article 2--freedom of scientific investigation and cooperation shall continue;

Article 3--free exchange of information and personnel in cooperation with the UN and other international agencies;

Article 4--does not recognize, dispute, or establish territorial claims and no new claims shall be asserted while the treaty is in force;

Article 5--prohibits nuclear explosions or disposal of radioactive wastes;

Article 6--includes under the treaty all land and ice shelves south of 60° 00'19 south, but that the water areas be covered by international law;

Article 7--treaty-state observers have free access, including aerial observation, to any area and may inspect all stations, installations, and equipment; advance notice of all activities and the introduction of military personnel must be given;

Article 8--allows for jurisdiction over observers and scientists by their own states;
Article 9--frequent consultative meetings take place among member nations;

Article 10--treaty states will discourage activities by any country in Antarctica that are contrary to the treaty;

Article 11--disputes to be settled peacefully by the parties concerned or, ultimately, by the ICJ;

Articles 12, 13, 14--deal with upholding, interpreting, and amending the treaty among involved nations.

Other agreements: more than 150 recommendations adopted at treaty consultative meetings and ratified by governments include--Agreed Measures for the Conservation of Antarctic Fauna and Flora (1964); Convention for the Conservation of Antarctic Seals (1972); Convention on the Conservation of Antarctic Marine Living Resources (1980); a mineral resources agreement was signed in 1988 but was subsequently rejected by some signatories and is likely to be replaced in 1991 by a comprehensive environmental protection agreement that defers minerals development for a long period.

_Economy

_Overview: No economic activity at present except for fishing off
the coast and small-scale tourism, both based abroad. Exploitation of mineral resources is unlikely because of technical difficulties, high costs, and objections by environmentalists.

_Economy_

_Overview:_ The economy is primarily service oriented, with tourism
the most important determinant of economic performance. During the period
1983-89, real GDP expanded at an annual average rate of about 7%.
Tourism's contribution to GDP, as measured by value added tax in hotels
and restaurants, rose from about 14% in 1983 to 16% in 1989, and
stimulated growth in other sectors—particularly in construction, communications, and public utilities. Antigua and Barbuda is one of the few areas in the Caribbean experiencing a labor shortage in some sectors of the economy.

_#_GDP: $350 million, per capita $5,470 (1989); real growth rate 3.0%
(1991 est.)

1 Atlantic Ocean INTELSAT earth station

_Defense Forces

_Branches: Royal Antigua and Barbuda Defense Force, Royal Antigua
and Barbuda Police Force (includes the Coast Guard)

_Manpower availability: NA

_Defense expenditures: $1.4 million, less than 1% of GDP (FY91)

_Arctic Ocean

_Geography

_Total area: 14,056,000 km2; includes Baffin Bay, Barents Sea,
Beaufort Sea, Chukchi Sea, East Siberian Sea, Greenland Sea, Hudson Bay,
Hudson Strait, Kara Sea, Laptev Sea, and other tributary water bodies

_Comparative area: slightly more than 1.5 times the size of the US;
smallest of the world's four oceans (after Pacific Ocean, Atlantic Ocean,
Coastline: 45,389 km

Climate: persistent cold and relatively narrow annual temperature ranges; winters characterized by continuous darkness, cold and stable weather conditions, and clear skies; summers characterized by continuous daylight, damp and foggy weather, and weak cyclones with rain or snow

Terrain: central surface covered by a perennial drifting polar icepack which averages about 3 meters in thickness, although pressure ridges may be three times that size; clockwise drift pattern in the Beaufort Gyral Stream, but nearly straight line movement from the New Siberian Islands (USSR) to Denmark Strait (between Greenland and Iceland); the ice pack is surrounded by open seas during the summer, but more than doubles in size during the winter and extends to the encircling land masses; the ocean floor is about 50% continental shelf (highest percentage of any ocean) with the remainder a central basin interrupted by three submarine ridges (Alpha Cordillera, Nansen Cordillera, and Lomonsov Ridge); maximum depth is 4,665 meters in the Fram Basin

Natural resources: sand and gravel aggregates, placer deposits, polymetallic nodules, oil and gas fields, fish, marine mammals (seals, whales)
**Environment**: endangered marine species include walruses and whales; ice islands occasionally break away from northern Ellesmere Island; icebergs calved from western Greenland and extreme northeastern Canada; maximum snow cover in March or April about 20 to 50 centimeters over the frozen ocean and lasts about 10 months; permafrost in islands; virtually icelocked from October to June; fragile ecosystem slow to change and slow to recover from disruptions or damage

**Note**: major chokepoint is the southern Chukchi Sea (northern access to the Pacific Ocean via the Bering Strait); ships subject to superstructure icing from October to May; strategic location between North America and the USSR; shortest marine link between the extremes of eastern and western USSR; floating research stations operated by the US and USSR

**Economy**

**Overview**: Economic activity is limited to the exploitation of natural resources, including crude oil, natural gas, fishing, and sealing.

**Communications**

**Ports**: Churchill (Canada), Murmansk (USSR), Prudhoe Bay (US)

**Telecommunications**: no submarine cables
Note: sparse network of air, ocean, river, and land routes; the Northwest Passage (North America) and Northern Sea Route (Asia) are important waterways.

Continental shelf: 200 m (depth) or to depth of exploitation;

Territorial sea: 200 nm (overflight and navigation permitted beyond 12 nm)

Disputes: short section of the boundary with Uruguay is in dispute; short section of the boundary with Chile is indefinite; claims
British-administered Falkland Islands (Islas Malvinas); claims
British-administered South Georgia and the South Sandwich Islands;
territorial claim in Antarctica

Climate: mostly temperate; arid in southeast; subantarctic in southwest

Terrain: rich plains of the Pampas in northern half, flat to rolling plateau of Patagonia in south, rugged Andes along western border

Natural resources: fertile plains of the pampas, lead, zinc, tin, copper, iron ore, manganese, crude oil, uranium

Land use: arable land 9%; permanent crops 4%; meadows and pastures 52%; forest and woodland 22%; other 13%; includes irrigated 1%

Environment: Tucuman and Mendoza areas in Andes subject to earthquakes; pamperos are violent windstorms that can strike Pampas and northeast; irrigated soil degradation; desertification; air and water pollution in Buenos Aires

Note: second-largest country in South America (after Brazil); strategic location relative to sea lanes between South Atlantic and South Pacific Oceans (Strait of Magellan, Beagle Channel, Drake Passage)

Economy

Overview: Argentina is rich in natural resources and has a highly literate population, an export-oriented agricultural sector, and a diversified industrial base. Nevertheless, following decades of mismanagement and statist policies, the economy has encountered major problems in recent years, leading to escalating inflation and a recession in 1988-90. A widening public-sector deficit and a multidigit inflation rate have dominated the economy over the past three years; retail prices rose nearly 5,000% in 1989 and another 1,345% in 1990. Since 1978, Argentina's external debt has nearly doubled to $60 billion, creating severe debt-servicing difficulties and hurting the country's creditworthiness with international lenders.

GNP: $82.7 billion, per capita $2,560; real growth rate - 3.5% (1990 est.)

Inflation rate (consumer prices): 1,350% (1990)

Climate: tropical cyclones (hurricanes) develop off the coast of Africa near Cape Verde and move westward into the Caribbean Sea; hurricanes can occur from May to December, but are most frequent from August to November

Terrain: surface usually covered with sea ice in Labrador Sea, Denmark Strait, and Baltic Sea from October to June; clockwise warm water gyre (broad, circular system of currents) in the north Atlantic, counterclockwise warm water gyre in the south Atlantic; the ocean floor is dominated by the Mid-Atlantic Ridge, a rugged north-south centerline for the entire Atlantic basin; maximum depth is 8,605 meters in the Puerto Rico Trench

Natural resources: oil and gas fields, fish, marine mammals (seals and whales), sand and gravel aggregates, placer deposits, polymetallic nodules, precious stones
Environment: endangered marine species include the manatee, seals, sea lions, turtles, and whales; municipal sludge pollution off eastern US, southern Brazil, and eastern Argentina; oil pollution in Caribbean Sea, Gulf of Mexico, Lake Maracaibo, Mediterranean Sea, and North Sea; industrial waste and municipal sewage pollution in Baltic Sea, North Sea, and Mediterranean Sea; icebergs common in Davis Strait, Denmark Strait, and the northwestern Atlantic from February to August and have been spotted as far south as Bermuda and the Madeira Islands; icebergs from Antarctica occur in the extreme southern Atlantic.

Note: ships subject to superstructure icing in extreme north Atlantic from October to May and extreme south Atlantic from May to October; persistent fog can be a hazard to shipping from May to September; major choke points include the Dardanelles, Strait of Gibraltar, access to the Panama and Suez Canals; strategic straits include the Dover Strait, Straits of Florida, Mona Passage, The Sound (Oresund), and Windward Passage; north Atlantic shipping lanes subject to icebergs from February to August; the Equator divides the Atlantic Ocean into the North Atlantic Ocean and South Atlantic Ocean.

Economy
Overview: Economic activity is limited to exploitation of natural resources, especially fish, dredging aragonite sands (The Bahamas), and crude oil and natural gas production (Caribbean Sea and North Sea).
Ports: Alexandria (Egypt), Algiers (Algeria), Antwerp (Belgium),
Barcelona (Spain), Buenos Aires (Argentina), Casablanca (Morocco),
Colon (Panama), Copenhagen (Denmark), Dakar (Senegal), Gdansk (Poland),
Hamburg (Germany), Helsinki (Finland), Las Palmas (Canary Islands, Spain),

Montreal (Canada), Naples (Italy), New Orleans (US), New York (US), Oran
(Algeria), Oslo (Norway), Piraeus (Greece), Rio de Janeiro (Brazil),
Rotterdam (Netherlands), Stockholm (Sweden)

Telecommunications: numerous submarine cables with most between
continental Europe and the UK, North America and the UK, and in the
Mediterranean; numerous direct links across Atlantic via INTELSAT
satellite network

Note: Kiel Canal and Saint Lawrence Seaway are two important
waterways

_* Economy

*_Overview: Australia has a prosperous Western-style capitalist economy, with a per capita GNP comparable to levels in industrialized West European countries. Rich in natural resources, Australia is a major exporter of agricultural products, minerals, metals, and fossil fuels. Of the top 25 exports, 21 are primary products, so that, as happened during 1983-84, a downturn in world commodity prices can have a big impact on the economy. The government is pushing for increased exports of manufactured goods but competition in international markets will be severe.

_#_ GDP: $255.9 billion, per capita $15,000; real growth rate 2.2% (1990)

_#_ Inflation rate (consumer prices): 6.9% (December 1990)

_#_ Unemployment rate: 9.2% (March 1991)

_#_ Budget: revenues $74.2 billion; expenditures $67.9 billion, including capital expenditures of NA (FY90)

_#_ Exports: $39.8 billion (f.o.b., FY90);

commodities--metals, minerals, coal, wool, cereals, meat, manufacturers;
partners--Japan 26%, US 11%, NZ 6%, South Korea 4%, Singapore 4%, UK, Taiwan, Hong Kong

_Imports: $42.0 billion (f.o.b., FY90);

commodities--manufactured raw materials, capital equipment, consumer goods;

partners--US 24%, Japan 19%, UK 6%, FRG 7%, NZ 4% (1990)

_External debt: $123.7 billion (September 1990)

_Industrial production: growth rate - 1.8% (1990); accounts for 32% of GDP

_Electricity: 38,000,000 kW capacity; 150,000 million kWh produced, 8,860 kWh per capita (1990)

_Industries: mining, industrial and transportation equipment, food processing, chemicals, steel, motor vehicles

_Agriculture: accounts for 5% of GNP and 37% of export revenues;
world's largest exporter of beef and wool, second-largest for mutton, and among top wheat exporters; major crops--wheat, barley, sugarcane, fruit; livestock--cattle, sheep, poultry

_Economic aid:_ donor--ODA and OOF commitments (1970-89), $10.4 billion

_Currency:_ Australian dollar (plural--dollars); 1 Australian dollar ($A) = 100 cents

Economy

Overview: Austria boasts a prosperous and stable capitalist economy with a sizable proportion of nationalized industry and extensive welfare benefits. Thanks to an excellent raw material endowment, a technically skilled labor force, and strong links to West German industrial firms, Austria has successfully occupied specialized niches in European industry and services (tourism, banking) and produces almost enough food to feed itself with only 8% of the labor force in agriculture. Improved export prospects from German unification and the opening of Eastern Europe will also boost the economy during the next few years. Living standards are roughly comparable with the large industrial countries of Western Europe. Problems for the 1990s include an aging population, the high level of subsidies, and the struggle to keep welfare benefits within budget capabilities. Austria, which has applied for EC membership, is currently involved in EC and European Free Trade Association negotiations for a European Economic Area and will have to adapt its economy to achieve freer movement of goods, services, capital, and labor with the EC.

_ECONOMY

Overview: The Bahamas is a stable, middle-income developing nation
whose economy is based primarily on tourism and offshore banking. Tourism
alone provides about 50% of GDP and directly or indirectly employs about
50,000 people or 40% of the local work force. The economy has slackened
in recent years, as the annual increase in the number of tourists slowed.
Nonetheless, the per capita GDP of $9,800 is one of the highest in the region.

Economy

Overview: Bangladesh is one of the poorest nations in the world. The economy is based on the output of a narrow range of agricultural products, such as jute, which is the main cash crop and major source of export earnings. Bangladesh is hampered by a relative lack of natural resources, population growth of more than 2% a year, large-scale unemployment, and a limited infrastructure; furthermore, it is highly vulnerable to natural disasters. Despite these constraints, real GDP growth averaged about 3.5% annually during 1985-89. A strong agricultural performance in FY90 pushed the growth rate up to 5.5%. Alleviation of poverty remains the cornerstone of the government's
development strategy.

Economy

Overview: A per capita income of $6,500 gives Barbados one of the highest standards of living of all the small island states of the eastern Caribbean. Historically, the economy was based on the cultivation of sugarcane and related activities. In recent years, however, the economy has diversified into manufacturing and tourism. The tourist industry is now a major employer of the labor force and a primary source of foreign exchange. An unemployment rate of 18% remains one of the most serious economic problems facing the country.

GDP: $1.7 billion, per capita $6,500; real growth rate 3.6% (1989 est.)

Inflation rate (consumer prices): 6.2% (1989)

Unemployment: 18% (1990)

_Economy

_Overview: This small private-enterprise economy has capitalized on its central geographic location, highly developed transport network, and diversified industrial and commercial base. Industry is concentrated mainly in the populous Flemish area in the north, although the government is encouraging reinvestment in the southern region of Walloon. With few natural resources Belgium must import essential raw materials, making its economy closely dependent on the state of world markets. Over 70% of trade is with other EC countries. During the period 1988-90 Belgium's economic performance was marked by buoyant output growth, moderate inflation, and a substantial external surplus. Real GDP grew by an average of 3.9% in 1988-90. However, the economy is likely to slow in 1991-92 to below 3% GDP growth.

_GDP: $144.8 billion, per capita $14,600; real growth rate 3.3% (1990)
Inflation rate (consumer prices): 3% (1991 est.)

Unemployment rate: 8.2% est. (1991 est.)

_Economy

Overview: Benin is one of the least developed countries in the
world because of limited natural resources and a poorly developed infrastructure. Agriculture accounts for almost 40% of GDP, employs about 60% of the labor force, and generates a major share of foreign exchange earnings. The industrial sector contributes only about 15% to GDP and employs 2% of the work force. Persistently low prices in recent years have limited hard currency earnings from Benin’s major exports of agricultural products and crude oil.

_GDP: $2.0 billion, per capita $400; real growth rate 2.6% (1990)_

_Inflation rate (consumer prices): 3.0% (1990)_

Economy

Overview: The economy, one of the world's least developed, is based on agriculture and forestry, which provide the main livelihood for 90% of the population and account for about 50% of GDP. Rugged mountains dominate the terrain and make the building of roads and other infrastructure difficult and expensive. The economy is closely aligned with that of India through strong trade and monetary links. Low wages in industry lead most Bhutanese to stay in agriculture. Most development projects, such as road construction, rely on Indian migrant labor. Bhutan's hydropower potential and its attraction for tourists are its most important natural resources.

Economy

Overview: The Bolivian economy steadily deteriorated between 1980 and 1985 as La Paz financed growing budget deficits by expanding the money supply and inflation spiraled--peaking at 11,700%. An austere orthodox economic program adopted by newly elected President Paz Estenssoro in 1985, however, succeeded in reducing inflation to between 10% and 20% annually since 1987, eventually restarting economic growth. President Paz Zamora has retained the economic policies of the previous government, keeping inflation down and continuing the moderate growth begun under his predecessor. Nevertheless, Bolivia continues to be one of the poorest countries in Latin America, and it remains vulnerable to
price fluctuations for its limited exports--agricultural products, minerals, and natural gas. Moreover, for many farmers, who constitute half of the country's work force, the main cash crop is coca, which is sold for cocaine processing.

**Economy**

**Overview:** The economy has historically been based on cattle raising and crops. Agriculture today provides a livelihood for over 80% of the population, but produces only about 50% of food needs and contributes a small 3% to GDP. The driving force behind the rapid economic growth of the 1970s and 1980s has been the mining industry. This sector, mostly on the strength of diamonds, has gone from generating 25% of GDP in 1980 to over 50% in 1989. No other sector has experienced such growth, especially not agriculture, which is plagued by erratic rainfall and poor soils. The unemployment rate remains a problem at 25%.

**GDP:** $3.1 billion, per capita $2,500; real growth rate 6.3%

(1990)

**Inflation rate (consumer prices):** 12.0% (1990)

**Unemployment rate:** 25% (1989)

**Budget:** revenues $1,719 million; expenditures $1,792 million, including capital expenditures of $NA (FY92 est.)

**Exports:** $1.8 billion (f.o.b., 1990 est.);
commodities--diamonds 77%, copper and nickel 12%, meat 4%, cattle, animal products;

partners--Switzerland, UK, US, SACU (Southern African Customs Union)

Imports: $1.7 billion (c.i.f., 1990 est.);

commodities--foodstuffs, vehicles and transport equipment, textiles, petroleum products;

partners--Switzerland, SACU (Southern African Customs Union), UK, US

External debt: $780 million (December 1990 est.)

Industrial production: growth rate 16.8% (FY86); accounts for about 57% of GDP, including mining

Electricity: 217,000 kW capacity; 630 million kWh produced, 510 kWh per capita (1989)

Industries: mining of diamonds, copper, nickel, coal, salt, soda
ash, potash; livestock processing

__Agriculture: accounts for only 3% of GDP; subsistence farming predominates; cattle raising supports 50% of the population; must import large share of food needs

__Economic aid: US commitments, including Ex-Im (FY70-89), $257 million; Western (non-US) countries, ODA and OOF bilateral commitments (1970-88), $1.8 billion; OPEC bilateral aid (1979-89), $43 million; Communist countries (1970-89), $29 million

_*_Economy

_#_Overview: The economy, with large agrarian, mining, and manufacturing sectors, entered the 1990s with declining real growth, runaway inflation, an unserviceable foreign debt of $122 billion, and a lack of policy direction. In addition, the economy remained highly regulated, inward-looking, and protected by substantial trade and investment barriers. Ownership of major industrial and mining facilities is divided among private interests--including several multinationals--and the government. Most large agricultural holdings are private, with the government channeling financing to this sector. Conflicts between large
landholders and landless peasants have produced intermittent violence.

The government is seeking an IMF standby loan despite several failed agreements over the past decade. Relations with foreign commercial banks remain strained because of mounting interest arrears on Brazil's long-term debt. The Collor government, which assumed office in March 1990, is embarked on an ambitious reform program that seeks to modernize and reinvigorate the economy by stabilizing prices, deregulating the economy, and opening it to increased foreign competition. A major long-run strength is Brazil's vast natural resources.

*Economy

**Overview:** The economy is a mixture of foreign and domestic entrepreneurship, government regulation and welfare measures, and village tradition. It is almost totally supported by exports of crude oil and natural gas, with revenues from the petroleum sector accounting for more than 50% of GDP. Per capita GDP of $9,600 is among the highest in the Third World, and substantial income from overseas investment supplements domestic production. The government provides for all medical services and subsidizes food and housing.

**GDP:** $3.3 billion, per capita $9,600; real growth rate 2.7% (1989 est.)

**Inflation rate (consumer prices):** 1.3% (1989 est.)

**Unemployment:** 2.5%, shortage of skilled labor (1989 est.)

**Budget:** revenues $1.2 billion; expenditures $1.4 billion, including capital expenditures of $230 million (1988 est.)
Exports: $1.9 billion (f.o.b., 1989);
commodities--crude oil, liquefied natural gas, petroleum products;
partners--Japan 60%, Thailand 10%, Singapore 4% (1988)

Imports: $1.2 billion (c.i.f., 1989);

Economy
Overview: Growth in the lackluster Bulgarian economy fell to the 2% annual level in the 1980s. By 1990 Sofia's foreign debt had skyrocketed to over $10 billion--giving a debt service ratio of more than 40% of hard currency earnings and leading the regime to declare
a moratorium on its hard currency payments. The post-Zhivkov regime faces major problems of renovating an aging industrial plant; coping with worsening energy, food, and consumer goods shortages; keeping abreast of rapidly unfolding technological developments; investing in additional energy capacity (the portion of electric power from nuclear energy reached over one-third in 1990); and motivating workers, in part by giving them a share in the earnings of their enterprises. A major decree of January 1989 summarized and extended the government's economic restructuring efforts, which include a partial decentralization of controls over production decisions and foreign trade. In October 1990 the Lukanov government proposed an economic reform program based on a US Chamber of Commerce study. It was never instituted because of a political stalemate between the BSP and the UDF. The new Popov government launched a similar reform program in January 1991, but full implementation has been slowed by continuing political disputes.

Economy

Overview: One of the poorest countries in the world, Burkina
has a high population density, few natural resources, and relatively infertile soil. Economic development is hindered by a poor communications network within a landlocked country. Agriculture provides about 40% of GDP and is entirely of a subsistence nature. Industry, dominated by unprofitable government-controlled corporations, accounts for about 15% of GDP.

Economy
Overview: Burma is a poor Asian country, with a per capita GDP of about $400. The nation has been unable to achieve any substantial improvement in export earnings because of falling prices for many of its major commodity exports. For rice, traditionally the most important export, the drop in world prices has been accompanied by shrinking markets and a smaller volume of sales. In 1985 teak replaced rice as the largest export and continues to hold this position. The economy is heavily dependent on the agricultural sector, which generates about half of GDP and provides employment for 66% of the work force.

GDP: $16.8 billion, per capita $408; real growth rate NEGL% (FY90 est.)

Inflation rate (consumer prices): 22.6% (FY89 est.)

Unemployment rate: 9.6% in urban areas (FY89 est.)

Budget: revenues $4.9 billion; expenditures $5.0 billion, including capital expenditures of $0.7 billion (FY89 est.)

Exports: $228 million (f.o.b., FY89)

commodities--teak, rice, oilseed, metals, rubber, gems;
partners--Southeast Asia, India, China, EC, Africa

Imports: $540 million (c.i.f., FY89)

Commodities--machinery, transport equipment, chemicals, food products;

partners--Japan, EC, China, Southeast Asia

External debt: $5.5 billion (December 1990 est.)

Industrial production: growth rate 2.6% (FY90 est.); accounts for 10% of GDP

Electricity: 950,000 kW capacity; 2,900 million kWh produced, 70 kWh per capita (1990)

Industries: agricultural processing; textiles and footwear; wood and wood products; petroleum refining; mining of copper, tin, tungsten, iron; construction materials; pharmaceuticals; fertilizer

Agriculture: accounts for 51% of GDP (including fish and forestry); self-sufficient in food; principal crops--paddy rice, corn, oilseed, sugarcane, pulses; world's largest stand of hardwood trees;
rice and teak account for 55% of export revenues; fish catch of
732,000 metric tons (FY90)

_Illicit drugs: world's largest illicit producer of opium poppy
and minor producer of cannabis for the international drug trade; opium
production is on the increase as growers respond to the collapse
of Rangoon's antinarcotic programs

Economy

Overview: A landlocked, resource-poor country in an early stage of economic development, Burundi is predominately agricultural with only a few basic industries. Its economic health depends on the coffee crop, which accounts for an average 90% of foreign exchange earnings each year. The ability to pay for imports therefore continues to rest largely on the vagaries of the climate and the international coffee market.

Economy
Overview: Cambodia is a desperately poor country whose economic development has been stymied by deadly political infighting. The economy is based on agriculture and related industries. Over the past decade Cambodia has been slowly recovering from its near destruction by war and political upheaval. It still remains, however, one of the world's poorest countries, with an estimated per capita GDP of about
$130. The food situation is precarious; during the 1980s famine has been averted only through international relief. In 1986 the production level of rice, the staple food crop, was able to meet only 80% of domestic needs. The biggest success of the nation’s recovery program has been in new rubber plantings and in fishing. Industry, other than rice processing, is almost nonexistent. Foreign trade is primarily with the USSR and Vietnam. Statistical data on the economy continues to be sparse and unreliable. Foreign aid from the USSR and Eastern Europe almost certainly is being slashed.

Economy

*Overview:* Over the past decade the economy has registered a remarkable performance because of the development of an offshore oil industry. Real GDP growth annually averaged 10% from 1978 to 1985. In 1986 Cameroon had one of the highest levels of income per capita in tropical Africa, with oil revenues picking up the slack as growth in other sectors softened. Because of the sharp drop in oil prices, however, the economy experienced serious budgetary difficulties and balance-of-payments disequilibrium. Despite the recent upsurge in oil prices, Cameroon's economic outlook is troubled. Oil reserves currently being exploited will be depleted in the early 1990s, so ways must be found to boost agricultural and industrial exports in the medium term. The Sixth Cameroon Development Plan (1986-91) stresses balanced development and designates agriculture as the basis of the country's economic future.

**Economy**

*Overview:* As an affluent, high-tech industrial society, Canada today closely resembles the US in per capita output, market-oriented economic system, and pattern of production. Since World War II the impressive growth of the manufacturing, mining, and service sectors has transformed the nation from a largely rural economy into one primarily industrial and urban. In the 1980s Canada registered one of the highest rates of real growth among the OECD nations, averaging about 3.2%. With its great natural resources, skilled labor force, and modern capital plant, Canada has excellent economic prospects. In mid-1990, however, the long-simmering problems between English- and French-speaking areas became so acute that observers spoke openly of a possible split in the confederation; foreign investors were becoming edgy.

Economy

Overview: Cape Verde's low per capita GDP reflects a poor natural resource base, a 17-year drought, and a high birthrate. The economy is service oriented, with commerce, transport, and public services accounting for 65% of GDP during the period 1985-88. Although nearly 70% of the population lives in rural areas, agriculture's share of GDP is only 16%; the fishing sector accounts for 4%. About 90% of food must be imported. The fishing potential, mostly lobster and tuna, is not fully exploited. In 1988 fishing represented only 3.5% of GDP. Cape Verde annually runs a high trade deficit, financed by remittances from emigrants and foreign aid.

GDP: $262 million, per capita $740; real growth rate 3.2% (1988 est.)

Inflation rate (consumer prices): 8.2% (1988 est.)

Unemployment rate: 25% (1988)

**Economy**

**Overview:** The Central African Republic (CAR) had a per capita income of roughly $440 in 1990. Subsistence agriculture, including forestry, is the backbone of the economy, with over 70% of the population living in the countryside. In 1988 the agricultural sector generated about 40% of GDP. Agricultural products accounted for about 60% of export earnings and the diamond industry for 30%. Important constraints to economic development include the CAR's landlocked position, a poor transportation infrastructure, and a weak human resource base.
Multilateral and bilateral development assistance plays a major role in providing capital for new investment.

Economy
Overview: The climate, geographic location, and lack of infrastructure and natural resources potential make Chad one of the most underdeveloped countries in the world. Its economy is burdened by the ravages of civil war, conflict with Libya, drought, and food shortages. In 1986 real GDP returned to its 1977 level, with cotton, the major cash crop, accounting for 48% of exports. Over 80% of the work force is employed in subsistence farming and fishing. Industry is based almost entirely on the processing of agricultural products, including cotton, sugarcane, and cattle. Chad is highly dependent on foreign aid, with its economy in trouble and many regions suffering from shortages. Oil companies are exploring areas north of Lake Chad and in the Doba basin in the south.

Economy

Overview: In 1990 economic growth slowed from an average of 6.2% for the previous six years to about 1.5% as a result of tight monetary policy aimed at reducing inflation. Monetary policy was not successful at slowing price increases until the end of the year, however, and inflation, stimulated by higher world oil prices, increased to 27.3% in 1990 from 21.4% in 1989. Copper prices held strong in 1990, helping to maintain a balance-of-payments surplus and increase international reserves. Most observers expect that inflationary pressures have run their course and price increases will slow during 1991, contributing to growth of 4-5%.

GDP: $26 billion, per capita $2,000; real growth rate 2.0% (1990)

Inflation rate (consumer prices): 27.3% (1990)
Unemployment rate: 5.6% (1990)

* Economy

# Overview: Beginning in late 1978 the Chinese leadership has been trying to move the economy from the sluggish Soviet-style centrally planned economy to a more productive and flexible economy with market elements--but still within the framework of monolithic Communist control.

To this end the authorities have switched to a system of household responsibility in agriculture in place of the old collectivization, increased the authority of local officials and plant managers in industry, permitted a wide variety of small-scale enterprise in services
and light manufacturing, and opened the foreign economic sector to increased trade and joint ventures. The most gratifying result has been a strong spurt in production, particularly in agriculture in the early 1980s. Otherwise, the leadership has often experienced in its hybrid system the worst results of socialism (bureaucracy, lassitude, corruption) and of capitalism (windfall gains and stepped-up inflation). Beijing thus has periodically backtracked, retightening central controls at intervals and thereby undermining the credibility of the reform process. Popular resistance and changes in central policy have weakened China's population control program, which is essential to the nation's long-term economic viability.

Economy

Overview: Economic development has slowed gradually since 1986, but growth rates remain high by Latin American standards. Conservative economic policies have kept inflation and unemployment near 30% and 10%, respectively. The rapid development of oil, coal, and other nontraditional industries over the past four years has helped to offset the decline in coffee prices--Colombia's major export. The collapse of the International Coffee Agreement in the summer of 1989, a troublesome rural insurgency, and drug-related violence dampen prospects for future growth.

GDP: $43.0 billion, per capita $1,300; real growth rate 3.7% (1990
Inflation rate (consumer prices): 32.4% (1990)

Unemployment rate: 10.4% (urban areas 1990) (1990)

Budget: revenues $4.39 billion; current expenditures $3.93 billion, capital expenditures $1.03 billion (1989 est.)

Exports: $6.9 billion (f.o.b., 1990);

commodities--coffee 24%, petroleum, coal, bananas, fresh cut flowers;

partners--US 36%, EC 21%, Japan 5%, Netherlands 4%, Sweden 3%

Imports: $5.0 billion (c.i.f., 1990);

commodities--industrial equipment, transportation equipment, foodstuffs, chemicals, paper products;

partners--US 34%, EC 16%, Brazil 4%, Venezuela 3%, Japan 3%
External debt: $16.7 billion (1990)

Industrial production: growth rate 5.0% (1990 est.); accounts for 25% of GDP

Electricity: 9,435,000 kW capacity; 36,071 million kWh produced, 1,090 kWh per capita (1990)

Industries: textiles, food processing, oil, clothing and footwear, beverages, chemicals, metal products, cement; mining—gold, coal, emeralds, iron, nickel, silver, salt

Agriculture: growth rate 4.9% (1990); accounts for 22% of GDP; crops make up two-thirds and livestock one-third of agricultural output; climate and soils permit a wide variety of crops, such as coffee, rice, tobacco, corn, sugarcane, cocoa beans, oilseeds, vegetables; forest products and shrimp farming are becoming more important

Illicit drugs: major illicit producer of cannabis and coca; key supplier of marijuana and cocaine to the US and other international drug markets; drug production and trafficking accounts for an estimated 4% of GDP and 28% of foreign exchange earnings

Economic aid: US commitments, including Ex-Im (FY70-89), $1.6
billion; Western (non-US) countries, ODA and OOF bilateral commitments (1970-88), $3.1 billion; Communist countries (1970-89), $399 million

Currency: Colombian peso (plural--pesos);
1 Colombian peso (Col$) = 100 centavos

Economy

Overview: One of the world's poorest countries, Comoros is made up of several islands that have poor transportation links, a young and rapidly increasing population, and few natural resources. The low
educational level of the labor force contributes to a low level of economic activity, high unemployment, and a heavy dependence on foreign grants and technical assistance. Agriculture, including fishing and forestry, is the leading sector of the economy. It contributes about 40% to GDP, employs 80% of the labor force, and provides most of the exports. The country is not self-sufficient in food production, and rice, the main staple, accounts for 90% of imports. During the period 1982-86 the industrial sector grew at an annual average rate of 5.3%, but its contribution to GDP was only 5% in 1988. Despite major investment in the tourist industry, which accounts for about 25% of GDP, growth has stagnated since 1983. A sluggish growth rate of 1.5% during 1985-90 has led to large budget deficits, declining incomes, and balance-of-payments difficulties.

Economy

Overview: Oil has supplanted forestry as the mainstay of the economy, providing about two-thirds of government revenues and exports. In the early 1980s rapidly rising oil revenues enabled Congo to finance large-scale development projects with growth averaging 5% annually, one of the highest rates in Africa. The world decline in oil prices, however, has forced the government to launch an austerity program to cope with declining receipts and mounting foreign debts.

*Economy

**Overview:** Agriculture provides the economic base. The major export earners are fruit, copra, and clothing. Manufacturing activities are limited to a fruit-processing plant and several clothing factories. Economic development is hindered by the isolation of the islands from foreign markets and a lack of natural resources and good transportation links. A large trade deficit is annually made up for by remittances from emigrants and from foreign aid. Current economic development plans call for exploiting the tourism potential and expanding the fishing industry.

**GDP:** $40.0 million, per capita $2,200 (1988 est.); real growth rate 5.3% (1986-88 est.)

**Inflation rate (consumer prices):** 8.0% (1988)

Economy

Overview: In 1990 the economy grew at an estimated 3.5% rate, a decrease from the strong 5.0% gain of the previous year. Gains in agricultural production (on the strength of good coffee and banana crops) and in construction, were partially offset by lower rates of growth for industry. In 1990 consumer prices rose by about 25% and the trade deficit widened. Unemployment is officially reported at 6%, but much underemployment remains. External debt, on a per capita basis, is among the world's highest.

GDP: $5.5 billion, per capita $1,810; real growth rate 3.6% (1990)

Inflation rate (consumer prices): 25% (1990 est.)

Unemployment rate: 6% (1990)

Exports: $1.4 billion (f.o.b., 1990);
commodities--coffee, bananas, textiles, sugar;

partners--US 75%, FRG, Guatemala, Netherlands, UK, Japan

Imports: $1.8 billion (c.i.f., 1990);

commodities--petroleum, machinery, consumer durables, chemicals, fertilizer, foodstuffs;

partners--US 35%, Japan, Guatemala, FRG

External debt: $4.5 billion (1989)

Industrial production: growth rate 2.3% (1990 est.); accounts for 23% of GDP

Electricity: 927,000 kW capacity; 2,987 million kWh produced, 980 kWh per capita (1990)

Industries: food processing, textiles and clothing, construction materials, fertilizer, plastic products
Agriculture: accounts for 20-25% of GDP and 70% of exports; cash commodities—coffee, beef, bananas, sugar; other food crops include corn, rice, beans, potatoes; normally self-sufficient in food except for grain; depletion of forest resources resulting in lower timber output

Illicit drugs: illicit production of cannabis on small scattered plots; transshipment country for cocaine from South America

Economic aid: US commitments, including Ex-Im (FY70-89), $1.4 billion; Western (non-US) countries, ODA and OOF bilateral commitments (1970-88), $781 million; Communist countries (1971-88), $27 million

Economy

Overview: The economy, centrally planned and largely state owned, is highly dependent on the agricultural sector and foreign trade. Sugar provides about 75% of export revenues and over half is exported to the USSR. The economy has stagnated since 1985 under policies that have deemphasized material incentives in the workplace, abolished farmers' informal produce markets, and raised prices of government-supplied goods and services. In 1990 the economy probably fell 3%, largely as a result of declining trade with the Soviet Union and Eastern Europe. Recently the government has been trying to increase trade with Latin America and China. Cuba has had difficulty servicing its foreign debt since 1982. The
government currently is encouraging foreign investment in tourist facilities. Other investment priorities include sugar, basic foods, and nickel. The annual $4 billion Soviet subsidy, a main prop to Cuba's threadbare economy, is likely to show a substantial decline over the next few years in view of the USSR's mounting economic problems. Instead of highly subsidized trade, Cuba will be shifting to trade at market prices in convertible currencies. In early 1991, the shortages of fuels, spare parts, and industrial products in general had become so severe as to amount to a deindustrialization process in the eyes of some observers.

_GNP: $20.9 billion, per capita $2,000; real growth rate - 3%

Economy

Overview: Czechoslovakia is highly industrialized and has a well-educated and skilled labor force. Its industry, transport, energy sources, banking, and most other means of production are state owned. The country is deficient, however, in energy and in many raw materials. Moreover, its aging capital plant lags well behind West European standards. Industry contributes almost 50% to GNP and construction contributes 10%. About 95% of agricultural land is in collectives or state farms. The centrally planned economy has been tightly linked in trade (80%) to the USSR and Eastern Europe. Growth has been sluggish, averaging less than 2% in the period 1982-89. GNP per capita is the highest in Eastern Europe. As in the rest of Eastern Europe, the sweeping political changes of 1989-90 have been disrupting normal channels of supply and compounding the government's economic problems. Having eased
restrictions on private enterprise in 1990 and having adjusted some key prices, Czechoslovakia is now implementing a broad two-year program to make the difficult transition from a command to a market economy. Inflation and unemployment are beginning to rise, albeit from comparatively low levels.

Economy

Overview: This modern economy features high-tech agriculture, up-to-date small-scale and corporate industry, extensive government welfare measures, comfortable living standards, and high dependence on foreign trade. The Danish economy is likely to maintain its slow but steady improvement in 1991. GDP grew by 1.3% in 1990 and probably will grow by about 1.25% in 1991; unemployment is running close to 10%. In 1990 Denmark had the lowest inflation rate in the EC, a record trade surplus, and the first balance-of-payments surplus in 26 years. As the government prepares for the economic integration of Europe during 1992, growth, investment, and competitiveness are expected to improve, reducing unemployment, inflation, and debt.

###Economy

###Overview: The economy is based on service activities connected with
the country's strategic location and status as a free trade zone in
northeast Africa. Djibouti provides services as both a transit port
for the region and an international transshipment and refueling center.
It has few natural resources and little industry. The nation is,
therefore, heavily dependent on foreign assistance to help support its
balance of payments and to finance development projects. An unemployment
rate of over 40% continues to be a major problem. Per capita
consumption dropped an estimated 35% over the last five years with
a population growth rate of 6% (including immigrants and refugees) and a
recession.

_GDP: $340 million, $1,030 per capita; real growth rate - 1.0% (1989 est.)

_Inflation rate (consumer prices): 3.7% (1989)

_Unemployment rate: over 40% (1989)

_Budget: revenues $131 million; expenditures $154 million, including
capital expenditures of $25 million (1990 est.)

_Exports: $190 million (f.o.b., 1990 est.);

commodities--hides and skins, coffee (in transit);
partners--Middle East 50%, Africa 43%, Western Europe 7%

Imports: $311 million (f.o.b., 1990 est.);

Commodities--foods, beverages, transport equipment, chemicals, petroleum products;

partners--EC 36%, Africa 21%, Asia 12%, US 2%

External debt: $355 million (December 1990)

Industrial production: growth rate 0.1% (1989); manufacturing accounts for 4% of GDP

Electricity: 110,000 kW capacity; 190 million kWh produced, 580 kWh per capita (1989)

Industries: limited to a few small-scale enterprises, such as dairy products and mineral-water bottling

Agriculture: accounts for only 5% of GDP; scanty rainfall limits crop production to mostly fruit and vegetables; half of population pastoral nomads herding goats, sheep, and camels; imports bulk of food
Economic aid: US commitments, including Ex-Im (FY78-89), $39 million; Western (non-US) countries, including ODA and OOF bilateral commitments (1970-88), $1,035 million; OPEC bilateral aid (1979-89), $149 million; Communist countries (1970-89), $35 million

*Economy

Overview: The economy is dependent on agriculture and thus is highly vulnerable to climatic conditions. Agriculture accounts for about 30% of GDP and employs 40% of the labor force. Principal products include bananas, citrus, mangoes, root crops, and coconuts. In 1988 the economy achieved a 5.6% growth in real GDP on the strength of a boost in construction, higher agricultural production, and growth of the small manufacturing sector based on the soap and garment industries. In 1989,
however, Hurricane Hugo wiped out 70% of the banana crop and affected other economic activity. The tourist industry remains undeveloped because of a rugged coastline and the lack of an international-class airport.

Economy

Overview: The economy is largely dependent on trade; imported components average 60% of the value of goods consumed in the domestic market. Rapid growth of free trade zones has established a significant expansion of manufacturing for export, especially wearing apparel. Over the past decade tourism has also increased in importance and is a major earner of foreign exchange and a source of new jobs. Agriculture remains a key sector of the economy. The principal commercial crop is sugarcane, followed by coffee, cotton, cocoa, and tobacco. Domestic industry is based on the processing of agricultural products, durable consumer goods, minerals, and chemicals. Unemployment is officially
reported at about 30%, but there is considerable underemployment. An increasing foreign debt burden and galloping inflation are the economy's greatest weaknesses.

Flag: three horizontal bands of yellow (top, double width), blue, and red with the coat of arms superimposed at the center of the flag; similar to the flag of Colombia which is shorter and does not bear a coat of arms.

Economy
Overview: Ecuador has substantial oil resources and rich agricultural areas. Growth has been uneven because of natural disasters (e.g., a major earthquake in 1987), fluctuations in global oil prices, and government policies designed to curb inflation. The government has not taken a supportive attitude toward either domestic or foreign investment, although its agreement to enter the Andean free trade zone is an encouraging move.

GDP: $10.6 billion, per capita $1,010; real growth rate 1.5% (1990)

Inflation rate (consumer prices): 49.5% (1990)

Unemployment rate: 8.0% (1990)

Budget: revenues $2.2 billion; expenditures $2.2 billion, including capital expenditures of $375 million (1991)

Exports: $2.7 billion (f.o.b., 1990)
commodities--petroleum 47%, coffee, bananas, cocoa products, shrimp, fish products;

partners--US 60%, Latin America, Caribbean, EC countries

Imports: $1.7 billion (f.o.b., 1990);

commodities--transport equipment, vehicles, machinery, chemicals;

partners--US 34%, Latin America, Caribbean, EC, Japan

External debt: $11.8 billion (December 1990)

Industrial production: growth rate - 3.8% (1989); accounts for almost 40% of GDP, including petroleum

Electricity: 1,983,000 kW capacity; 6,011 million kWh produced, 570 kWh per capita (1990)

Industries: petroleum, food processing, textiles, metal works, paper products, wood products, chemicals, plastics, fishing, timber
Agriculture: accounts for 18% of GDP and 35% of labor force (including fishing and forestry); leading producer and exporter of bananas and balsawood; other exports—coffee, cocoa, fish, shrimp; crop production—rice, potatoes, manioc, plantains, sugarcane; livestock sector—cattle, sheep, hogs, beef, pork, dairy products; net importer of foodgrains, dairy products, and sugar

Illicit drugs: relatively small producer of coca following the successful eradication campaign of 1985-87; significant transit country, however, for derivatives of coca originating in Colombia, Bolivia, and Peru

Economic aid: US commitments, including Ex-Im (FY70-89), $498 million; Western (non-US) countries, ODA and OOF bilateral commitments (1970-88), $1.7 billion; Communist countries (1970-89), $64 million

Economy

Overview: Egypt has one of the largest public sectors of all
the Third World economies, most industrial plants being owned by the
government. Overregulation holds back technical modernization and
foreign investment. Even so, the economy grew rapidly during the late
1970s and early 1980s, but in 1986 the collapse of world oil prices
and an increasingly heavy burden of debt servicing led Egypt to begin
negotiations with the IMF for balance-of-payments support. As part of
the 1987 agreement with the IMF, the government agreed to institute
a reform program to reduce inflation, promote economic growth, and
improve its external position. The reforms have been slow in coming,
however, and the economy has been largely stagnant for the past
three years. The addition of 1 million people every seven months
to Egypt's population exerts enormous pressure on the 5% of the total
land area available for agriculture.

**Economy**

*Overview:* The agricultural sector accounts for 25% of GDP, employs about 40% of the labor force, and contributes about 66% to total exports. Coffee is the major commercial crop, accounting for 45% of export earnings. The manufacturing sector, based largely on food and beverage processing, accounts for 18% of GDP and 15% of employment. Economic losses because of guerrilla sabotage total more than $2.0 billion since 1979. The costs of maintaining a large military seriously constrain the government's efforts to provide essential social services. Nevertheless, growth in national output last year exceeded growth in population for the first time since 1987.

*Economy

**Overview:** The economy, destroyed during the regime of former President Macias Nguema, is now based on agriculture, forestry, and fishing, which account for about 60% of GNP and nearly all exports. Subsistence agriculture predominates, with cocoa, coffee, and wood products providing income, foreign exchange, and government revenues. There is little industry. Commerce accounts for about 10% of GNP, and the construction, public works, and service sectors for about 34%. Undeveloped natural resources include titanium, iron ore, manganese, uranium, and alluvial gold. Oil exploration, taking place under concessions offered to US, French, and Spanish firms, has been moderately successful, and some revenues from oil exports will begin rolling in by mid-1991.

**GDP:** $144 million, per capita $411; real growth rate 2.9% (1988 est.)

**Inflation rate (consumer prices):** 5.9% (1989 est.)

Economy

Overview: Ethiopia is one of the poorest and least developed countries in Africa. Its economy is based on subsistence agriculture, which accounts for about 45% of GDP, 90% of exports, and 80% of total employment; coffee generates 60% of export earnings. The manufacturing sector is heavily dependent on inputs from the agricultural sector. Over 90% of large-scale industry, but less then 10% of
agriculture, is state run. Favorable agricultural weather largely explains the 4.5% growth in output in FY89.

Economy

Overview: The economy is based on sheep farming, which directly or indirectly employs most of the work force. A few dairy herds are kept to meet domestic consumption of milk and milk products, and crops grown are primarily those for providing winter fodder. Exports feature shipments of high-grade wool to the UK and the sale of postage stamps and coins. Rich stocks of fish in the surrounding waters are not presently exploited by the islanders. So far efforts to establish a domestic fishing industry have been unsuccessful. In 1987 the government began selling fishing licenses to foreign trawlers operating within the Falklands exclusive fishing zone. These license fees amount to more than $40 million per year and are a primary source of income for the government. To encourage tourism, the Falkland Islands Development Corporation has built three lodges for visitors attracted by the
abundant wildlife and trout fishing.

Economy

Overview: The Faroese, who have long been enjoying the affluent
living standards of the Danes and other Scandinavians, now must cope with the decline of the all-important fishing industry and with an external debt twice the size of annual income. When the nations of the world extended their fishing zones to 200 nautical miles in the early 1970s, the Faroese no longer could continue their traditional long-distance fishing and subsequently depleted their own nearby fishing areas; one estimate foresaw a 25% drop in fish catch in 1990 alone. Half the fishing fleet is for sale, and the 22 fish-processing plants work at only half capacity. The government no longer can maintain its high level of spending on roads and tunnels, hospitals, sports facilities, and other social welfare programs.

Economy

Overview: Fiji’s economy is primarily agricultural, with a large subsistence sector. Sugar exports are a major source of foreign exchange and sugar processing accounts for one-third of industrial output.
Industry, including sugar milling, contributes 13% to GDP. Fiji traditionally had earned considerable sums of hard currency from the 250,000 tourists who visited each year. In 1987, however, after two military coups, the economy went into decline. GDP dropped by 7.8% in 1987 and by another 2.5% in 1988; political uncertainty created a drop in tourism, and the worst drought of the century caused sugar production to fall sharply. In contrast, sugar and tourism turned in strong performances in 1989, and the economy rebounded vigorously. In 1990 the economy received a setback from cyclone Sina which cut sugar output by an estimated 21%.

Economy

Overview: Finland has a highly industrialized, largely free market economy, with per capita output nearly three-fourths the US figure. Its main economic force is the manufacturing sector--principally the wood, metals, and engineering industries. Trade is important, with the export of goods representing about 30% of GDP. Except for timber and several minerals, Finland depends on imported raw materials, energy, and some components of manufactured goods. Because of the climate, agricultural development is limited to maintaining self-sufficiency in basic commodities. The economy, which experienced an average of 4.9% annual growth between 1987 and 1989, leveled off in 1990 and is now in a recession facing negative growth in 1991. The clearing account system between Finland and the Soviet Union in the postwar period--mainly Soviet oil and gas for Finnish manufactured goods--had kept Finland isolated from world recessions; the system, however, was dismantled on 1 January 1991 in favor of hard currency trade. As a result, Finland must increase its competitiveness in certain sectors, for example, textiles, foodstuffs, paper, and metals, and has already begun to shift trade
westward. Finland, as a member of EFTA, is negotiating a European Economic Area arrangement with the EC which would allow for free movement of capital, goods, services, and labor within the organization.

Economy

Overview: One of the world's most developed economies, France
has substantial agricultural resources and a highly diversified modern
industrial sector. Large tracts of fertile land, the application of modern technology, and subsidies have combined to make it the leading agricultural producer in Western Europe. France is largely self-sufficient in agricultural products and is a major exporter of wheat and dairy products. The industrial sector generates about one-quarter of GDP, and the growing services sector has become crucial to the economy. After sluggish growth during the period 1982-87, the economy expanded at a rapid 3.8% pace in 1988-89. The economy slowed down in 1990, with growth of 2.0% expected in 1991. The economy has had difficulty generating enough jobs for new entrants into the labor force, resulting in a high unemployment rate, which probably will rise to around 10% during the slowdown. The steadily advancing economic integration within the European Community is a major force affecting the fortunes of the various economic sectors.

_GDP: $873.5 billion, per capita $15,500; real growth rate 2.8% (1990)_

_Inflation rate (consumer prices): 3.7% (1990 est.)_

_Unemployment rate: 9% (1990)_

_Budget: revenues $207.6 billion; expenditures $224.2 billion, including capital expenditures of $34 billion (1990 est.)_
Exports: $181.2 billion (f.o.b., 1990);

commodities—machinery and transportation equipment, chemicals, foodstuffs, agricultural products, iron and steel products, textiles and clothing;

Economy

Overview: The economy is tied closely to that of France through subsidies and imports. Besides the French space center at Kourou, fishing and forestry are the most important economic activities, with exports of fish and fish products (mostly shrimp) accounting for more than 60% of total revenue in 1987. The large reserves of tropical hardwoods, not fully exploited, support an expanding sawmill industry that provides sawn logs for export. Cultivation of crops--rice, cassava, bananas, and sugarcane--are limited to the coastal area, where the population is largely concentrated. French Guiana is heavily dependent on imports of food and energy. Unemployment is a serious problem, particularly among younger workers.

GDP: $186 million, per capita $2,240; real growth rate NA% (1985)

__Economy
Overview: The economy, dependent on timber and manganese until the early 1970s, is now dominated by the oil sector. During the period 1981-85 oil accounted for about 46% of GDP, 83% of export earnings, and 65% of government revenues on average. The high oil prices of the early 1980s contributed to a substantial increase in per capita income, stimulated domestic demand, reinforced migration from rural to urban areas, and raised the level of real wages to among the highest in Sub-Saharan Africa. The three-year slide of Gabon's economy, which began with falling oil prices in 1985, was reversed in 1989 because of a near doubling of oil prices over their 1988 lows. In 1990 the economy continued to grow, but debt servicing problems are hindering economic advancement. The agricultural and industrial sectors are relatively underdeveloped, except for oil.

Economy

Overview: The Gambia has no important mineral or other natural resources and has a limited agricultural base. It is one of the world's poorest countries with a per capita income of about $230. About 75% of the population is engaged in crop production and livestock raising, which contributes 30% to GDP. Small-scale manufacturing activity--processing peanuts, fish, and hides--accounts for less than 10% of GDP. Tourism is a growing industry. The Gambia imports one-third of its food, all fuel, and most manufactured goods. Exports are concentrated on peanut products (about 75% of total value).

GDP: $195 million, per capita $230; real growth rate 6.0% (FY90 est.)
Inflation rate (consumer prices): 6.0% (FY91)

Gaza Strip

Note: The war between Israel and the Arab states in June 1967 ended with Israel in control of the West Bank and the Gaza Strip, the Sinai, and the Golan Heights. As stated in the 1978 Camp David Accords and reaffirmed by President Reagan's 1 September 1982 peace initiative, the final status of the West Bank and the Gaza Strip, their relationship with their neighbors, and a peace treaty between Israel and Jordan are to be negotiated among the concerned parties. Camp David further specifies that these negotiations will resolve the respective boundaries. Pending the completion of this process, it is US policy that the final status of the West Bank and the Gaza Strip has yet to be determined. In the view of the US, the term West Bank describes all of the area west of the Jordan under Jordanian administration before the 1967 Arab-Israeli war. With respect to negotiations envisaged in the framework agreement, however, it is US policy that a distinction must be made between Jerusalem and the rest of the West Bank because of the city's special status and circumstances. Therefore, a negotiated solution for the final status of Jerusalem could be different in character from that of the rest of the West Bank.

Note: The Gaza Strip is currently governed by Israeli military authorities and Israeli civil administration. It is US policy that the final status of the Gaza Strip will be determined by negotiations among the concerned parties. These negotiations will determine how this area is to be governed.
Economy

Overview: Nearly half the labor force of the Gaza Strip is employed across the border by Israeli industrial, construction, and agricultural enterprises, with worker transfer funds accounting for 46% of GNP in 1990. The once dominant agricultural sector now contributes only 13% to GNP, about the same as that of the construction sector, and industry accounts for 7%. Gaza depends upon Israel for 90% of its imports and as a market for 80% of its exports. Unrest in the territory in 1988-91 (intifadah) has raised unemployment and substantially lowered the incomes of the population. Furthermore, the Persian Gulf crisis dealt a severe blow to the Gaza Strip in 1990 and on into 1991. Worker remittances from the Gulf states have plunged, unemployment has increased, and export revenues have fallen dramatically. The risk of malnutrition is a real possibility in 1991.

_#_Economy

_#_Overview: The newly unified German economy presents a starkly contrasting picture. Western Germany has an advanced market economy and is a leading exporter. It experienced faster-than-projected real growth largely because of demand in eastern Germany for western German goods. Western Germany has a highly urbanized and skilled population which enjoys excellent living standards, abundant leisure time, and comprehensive social welfare benefits. Western Germany is relatively poor in natural resources, coal being the most important mineral. Western Germany's world-class companies manufacture technologically advanced goods. The region's economy is mature: manufacturing and service
industries account for the dominant share of economic activity, and raw materials and semimanufactured products constitute a large proportion of imports. In 1989 manufacturing accounted for 31% of GDP, with other sectors contributing lesser amounts. In recent years, gross fixed investment has accounted for about 21% of GDP. In 1990 GDP in the western region was an estimated $16,300 per capita.

In contrast, eastern Germany's obsolete command economy, once dominated by smokestack heavy industries, has been undergoing a wrenching change to a market economy. Industrial production in early 1991 is down 50% from the same period last year, due largely to the slump in domestic demand for eastern German-made goods and the ongoing economic restructuring. The FRG's legal, social welfare, and economic systems have been extended to the east, but economic restructuring--privatizing industry, establishing clear property rights, clarifying responsibility for environmental clean-up, and removing Communist-era holdovers from management--is proceeding slowly so far, deterring outside investors. The region is one of the world's largest producers of low-grade lignite coal, but has few other resources. The quality of statistics from eastern Germany remains poor; Bonn is still trying to bring statistics for the region in line with West German practices.

The most challenging economic problem of a united Germany is the reconstruction of eastern Germany's economy--specifically, finding the right mix of fiscal, regulatory, monetary, and tax policies that will spur investment in the east without derailing western Germany's
healthy economy or damaging relations with Western partners. The
biggest danger is that soaring unemployment in eastern Germany, which
could climb to the 30 to 40% range, could touch off labor disputes
or renewed mass relocation to western Germany and erode investor
confidence in eastern Germany. Overall economic activity grew an
estimated 4.6% in western Germany in 1990, while dropping roughly 15% in
eastern Germany. Per capita GDP in the eastern region was approximately
$8,700 in 1990.

Economy

Overview: Supported by substantial international assistance, Ghana has been implementing a steady economic rebuilding program since 1983,
including moves toward privatization and relaxation of government controls. Heavily dependent on cocoa, gold, and timber exports, economic growth is threatened by a poor cocoa harvest and higher oil prices in 1991. Rising inflation--unofficially estimated at 50%--could undermine Ghana's relationships with multilateral lenders. Civil service wage increases and the cost of peacekeeping forces sent to Liberia are boosting government expenditures and undercutting structural adjustment reforms. Ghana opened a stock exchange in 1990.

Economy

Overview: Greece has a mixed capitalistic economy with the basic entrepreneurial system overlaid in 1981-89 by a socialist government that enlarged the public sector from 55% of GDP in 1981 to about 70% when Prime Minister Mitsotakis took office. Mitsotakis inherited several severe economic problems from the preceding socialist and caretaker governments, which neglected the runaway budget deficit, a ballooning
current account deficit, and accelerating inflation. With only a
two-seat majority in the Chamber of Deputies, Mitsotakis has concentrated
on cutting the public-sector payroll, cautiously expanding the tax base,
and adopting guidelines for privatizing Greece's loss-ridden state-owned
enterprises. Once the political situation is sorted out, Greece will have
to face the challenges posed by the steadily increasing integration of
the European Community, including the progressive lowering of trade and
investment barriers. Tourism continues as a major industry, providing a
vital offset to the sizable commodity trade deficit.

Economy

Overview: Over the past 25 years, the economy has changed from one based on subsistence whaling, hunting, and fishing to one dependent on foreign trade. Fishing is still the most important industry, accounting for over 75% of exports and about 25% of the population's income. Maintenance of a social welfare system similar to Denmark's has given the public sector a dominant role in the economy. In 1990, the economy became critically dependent on shrimp exports and an annual subsidy (now about $355 million) from the Danish Government because cod exports had fallen, the zinc and lead mine closed, and a large promising platinum and gold mine was not yet operational. Greenland has signed a contract for its largest construction project, a power plant to supply the capital. To avoid a decline in the economy, Denmark has agreed to pay 75% of the costs of running Sondrestrom Airbase and Kulusuk Airfield as civilian bases after the US withdraws in 1992.

**Economy**

**Overview:** The economy is essentially agricultural and centers on the traditional production of spices and tropical plants. Agriculture accounts for about 16% of GDP and 80% of exports and employs 24% of the labor force. Tourism is the leading foreign exchange earner, followed by agricultural exports. Manufacturing remains relatively undeveloped, but is expected to grow, given a more favorable private investment climate since 1983. Despite an impressive average annual growth rate for the economy of 5.6% during the period 1986-90, unemployment remains high at about 25%.

Economy
Overview: The economy depends on agriculture, tourism, light industry, and services. It is also dependent upon France for large subsidies and imports. Tourism is a key industry, with most tourists from the US. In addition, an increasingly large number of cruise ships visit the islands. The traditionally important sugarcane crop is slowly being replaced by other crops, such as bananas (which now supply about 50% of export earnings), eggplant, and flowers. Other vegetables and root crops are cultivated for local consumption, although Guadeloupe is still dependent on imported food, which comes mainly from France. Light industry consists mostly of sugar and rum production. Most manufactured goods and fuel are imported. Unemployment is especially high among the young.

Economy

Overview: Guinea-Bissau ranks among the poorest countries in the world, with a per capita GDP below $200. Agriculture and fishing are the main economic activities, with cashew nuts, peanuts, and palm kernels the primary exports. Exploitation of known mineral deposits is unlikely at present because of a weak infrastructure and the high cost of development. The government's four-year plan (1988-91) has targeted agricultural development as the top priority.

GDP: $154 million, per capita $160; real growth rate 5.0% (1989)

Economy

Overview: After growing on average at less than 1% a year in 1986-87, GDP dropped by 3% a year in 1988-89. The decline resulted from bad weather, labor trouble in the canefields, and flooding and equipment problems in the bauxite industry. Consumer prices rose about 35% in 1988 and by over 100% in 1989, and the current account deficit widened substantially as sugar and bauxite exports fell. Moreover, electric power is in short supply and constitutes a major barrier to future gains in national output. The government, in association with international financial agencies, seeks to reduce its payment arrears and to raise new funds. The government's stabilization program--aimed at establishing realistic exchange rates, reasonable price stability, and a resumption of growth--requires considerable public administrative abilities and continued patience by consumers during a long incubation period.

Economy

Overview: About 85% of the population live in abject poverty. Agriculture is mainly small-scale subsistence farming and employs two-thirds of the work force. The majority of the population does not have ready access to safe drinking water, adequate medical care, or sufficient food. Few social assistance programs exist, and the lack of employment opportunities remains one of the most critical problems facing the economy, along with soil erosion and political instability.

_Economy

Overview: Honduras is one of the poorest countries in the Western Hemisphere. Agriculture, the most important sector of the economy,
accounts for nearly 30% of GDP, employs 62% of the labor force, and produces two-thirds of exports. Productivity remains low. Industry, still in its early stages, employs nearly 9% of the labor force, accounts for 15% of GDP, and generates 20% of exports. The service sectors, including public administration, account for 50% of GDP and employ nearly 20% of the labor force. Basic problems facing the economy include rapid population growth, high unemployment, sharply increased inflation, a lack of basic services, a large and inefficient public sector, and the dependence of the export sector mostly on coffee and bananas, which are subject to sharp price fluctuations. Despite government efforts at reform and large-scale foreign assistance, the economy still is unable to take advantage of its sizable natural resources.

Economy

Overview: Hong Kong has a free market economy with few tariffs
or nontariff barriers. Natural resources are limited, and food and raw materials must be imported. Manufacturing accounts for about 18% of GDP, employs 28% of the labor force, and exports about 90% of its output. Real GDP growth averaged a remarkable 8% in 1987-88, then slowed to 2.5-3.0% in 1989-90. Unemployment, which has been declining since the mid-1980s, is now less than 2%. A shortage of labor continues to put upward pressure on prices and the cost of living. Short-term prospects remain solid so long as major trading partners continue to be prosperous. The crackdown in China in 1989-90 casts a long shadow over the longer term economic outlook.

Economy

Overview: Agriculture is an important sector, providing sizable export earnings and meeting domestic food needs. Industry accounts for about 40% of GNP and 30% of employment. About 40% of Hungary's foreign trade is with the USSR and Eastern Europe and a third is with the EC. Low rates of growth reflect the inability of the Soviet-style economy to modernize capital plant and motivate workers. GNP declined by 1% in 1989 and by an estimated 6% in 1990. Since 1985 external debt has more than doubled, to over $20 billion. In recent years Hungary has experimented widely with decentralized and market-oriented enterprises. The newly democratic government has renounced the Soviet economic growth model and plans to open the economy to wider market forces and to much closer economic relations with Western Europe. Prime Minister Antall has declared his intention to move foward on privatization of state enterprises, provision for bankruptcy, land reform, and marketization of international trade, but concerns over acceptable levels of unemployment and inflation may slow the reform process.

Economy

Overview: Iceland's prosperous Scandinavian-type economy is basically capitalistic, but with extensive welfare measures, low
unemployment, and comparatively even distribution of income. The economy is heavily dependent on the fishing industry, which provides nearly 75% of export earnings. In the absence of other natural resources, Iceland's economy is vulnerable to changing world fish prices. As a result of climbing fish prices in 1990 and a noninflationary labor agreement, Iceland is pulling out of a recession, which began in mid-1988 with a sharp decline in fish prices and an imposition of quotas on fish catches to conserve stocks. Inflation was down sharply from 20% in 1989 to 8% in 1990.

Economy
Overview: India's economy is a mixture of traditional village farming and handicrafts, modern agriculture, old and new branches of industry, and a multitude of support services. It presents both the entrepreneurial skills and drives of the capitalist system and widespread government intervention of the socialist mold. Growth of 4% to 5% annually in the 1980s has softened the impact of population growth on unemployment, social tranquility, and the environment. Agricultural output has continued to expand, reflecting the greater use of modern farming techniques and improved seed that have helped to make India self-sufficient in food grains and a net agricultural exporter. However, tens of millions of villagers, particularly in the south, have not benefited from the green revolution and live in abject poverty. Industry has benefited from a partial liberalization of controls. The growth rate of the service sector has also been strong. India, however, has been challenged more recently by much lower foreign exchange reserves, higher inflation, and a large debt service burden.

Ports: Bombay, Calcutta, Cochin, Kandla, Madras, New Mangalore, Port Blair (Andaman Islands)

Merchant marine: 308 ships (1,000 GRT or over) totaling 6,087,451 GRT/10,150,460 DWT; includes 1 short-sea passenger, 8 passenger-cargo, 100 cargo, 1 roll-on/roll-off cargo, 8 container, 54 petroleum, oils, and lubricants (POL) tanker, 10 chemical tanker, 9 combination ore/oil, 115 bulk, 2 combination bulk

Civil air: 93 major transport aircraft

Airports: 345 total, 288 usable; 198 with permanent-surface runways; 2 with runways over 3,659 m; 57 with runways 2,440-3,659 m; 88 with runways 1,220-2,439 m

Telecommunications: poor domestic telephone service, international radio communications adequate; 4,700,000 telephones; stations--96 AM, 4 FM, 274 TV (government controlled); domestic satellite system for communications and TV; 3 Indian Ocean INTELSAT earth stations; submarine cables to Malaysia and United Arab Emirates
Defense Forces
Branches: Army, Navy, Air Force, Police Force, Border Security
Forces, Coast Guard, Assam Rifles

Manpower availability: males 15-49, 232,793,714; 137,259,444 fit for military service; about 9,431,908 reach military age (17) annually

Defense expenditures: $9.2 billion, 3.5% of GNP (FY91)

Indian Ocean

Geography
Total area: 73,600,000 km²; Arabian Sea, Bass Strait, Bay of Bengal, Java Sea, Persian Gulf, Red Sea, Strait of Malacca, Timor Sea, and other tributary water bodies

Comparative area: slightly less than eight times the size of the US; third-largest ocean (after the Pacific Ocean and Atlantic Ocean, but larger than the Arctic Ocean)

Coastline: 66,526 km

Climate: northeast monsoon (December to April), southwest monsoon (June to October); tropical cyclones occur during May/June and October/November in the north Indian Ocean and January/February in the south Indian Ocean
Terrain: surface dominated by counterclockwise gyre (broad, circular system of currents) in the south Indian Ocean; unique reversal of surface currents in the north Indian Ocean—low pressure over southwest Asia from hot, rising, summer air results in the southwest monsoon and southwest-to-northeast winds and currents, while high pressure over northern Asia from cold, falling, winter air results in the northeast monsoon and northeast-to-southwest winds and currents; ocean floor is dominated by the Mid-Indian Ocean Ridge and subdivided by the Southeast Indian Ocean Ridge, Southwest Indian Ocean Ridge, and Ninety East Ridge; maximum depth is 7,258 meters in the Java Trench.

Natural resources: oil and gas fields, fish, shrimp, sand and gravel aggregates, placer deposits, polymetallic nodules.

Environment: endangered marine species include the dugong, seals, turtles, and whales; oil pollution in the Arabian Sea, Persian Gulf, and Red Sea.

Note: major choke points include Bab el Mandeb, Strait of Hormuz, Strait of Malacca, southern access to the Suez Canal, and the Lombok Strait; ships subject to superstructure icing in extreme south near Antarctica from May to October.

Economy
Overview: The Indian Ocean provides a major transportation highway for the movement of petroleum products from the Middle East to Europe and North and South American countries. Fish from the ocean are of growing economic importance to many of the bordering countries as a source of both food and exports. Fishing fleets from the USSR, Japan, Korea, and Taiwan also exploit the Indian Ocean for mostly shrimp and tuna. Large reserves of hydrocarbons are being tapped in the offshore areas of Saudi Arabia, Iran, India, and Western Australia. An estimated 40% of the world's offshore oil production comes from the Indian Ocean. Beach sands rich in heavy minerals and offshore placer deposits are actively exploited by bordering countries, particularly India, South Africa, Indonesia, Sri Lanka, and Thailand.

Industries: based on exploitation of natural resources, particularly marine life, minerals, oil and gas production, fishing, sand and gravel aggregates, placer deposits

Communications

Ports: Bombay (India), Calcutta (India), Madras (India), Colombo (Sri Lanka), Durban (South Africa), Fremantle (Australia), Jakarta (Indonesia), Melbourne (Australia), Richard's Bay (South Africa)

Telecommunications: no submarine cables

Geography
Total area: 1,919,440 km²; land area: 1,826,440 km²

Comparative area: slightly less than three times the size of Texas

Land boundaries: 2,602 km total; Malaysia 1,782 km, Papua New Guinea 820 km

Coastline: 54,716 km

Maritime claims: (measured from claimed archipelagic baselines);

Exclusive economic zone: 200 nm;

Territorial sea: 12 nm

Disputes: sovereignty over Timor Timur (East Timor Province) disputed with Portugal

Climate: tropical; hot, humid; more moderate in highlands

Terrain: mostly coastal lowlands; larger islands have interior mountains
Natural resources: crude oil, tin, natural gas liquids, nickel, timber, bauxite, copper, fertile soils, coal, gold, silver

Land use: arable land 8%; permanent crops 3%; meadows and pastures 7%; forest and woodland 67%; other 15%; includes irrigated 3%

Environment: archipelago of 13,500 islands (6,000 inhabited); occasional floods, severe droughts, and tsunamis; deforestation

Note: straddles Equator; strategic location astride or along major sea lanes from Indian Ocean to Pacific Ocean

the flag of Monaco which is shorter; also similar to the flag of Poland
which is white (top) and red

Economy

Overview: Indonesia is a mixed economy with many socialist
institutions and central planning but with a recent emphasis on
deregulation and private enterprise. Indonesia has extensive natural
wealth yet, with a large and rapidly increasing population, it remains a
poor country. GDP growth in 1985-89 averaged about 4%, somewhat short of
the more than 5% rate needed to absorb the 2.3 million workers annually
entering the labor force. Agriculture, including forestry and fishing, is
an important sector, accounting for 21% of GDP and over 50% of the labor force. The staple crop is rice. Once the world's largest rice importer, Indonesia is now nearly self-sufficient. Plantation crops—rubber and palm oil—and textiles and plywood are being encouraged for both export and job generation. Industrial output now accounts for 30% of GDP based on a supply of diverse natural resources, including crude oil, natural gas, timber, metals, and coal. Of these, the oil sector dominates the external economy, generating more than 20% of the government's revenues and 40% of export earnings in 1989. However, the economy's growth is very dependent on the continuing expansion of nonoil exports. Japan is Indonesia's most important customer and supplier of aid.

Economy

Overview: Since the 1979 revolution, the banks, petroleum industry, transportation, utilities, and mining have been nationalized, but the new five-year plan—the first since the revolution—passed in January 1990, calls for the transfer of many government-controlled enterprises to the private sector. Disruptions from the bitter war with Iraq, massive corruption, mismanagement, demographic pressures, and ideological rigidities have kept economic growth at depressed levels. Oil accounts for over 90% of export revenues. A combination of war damage and low oil prices brought a 2% drop in GNP in 1988. GNP probably rose slightly in 1989, considerably short of the 3.2% population growth rate in 1989. Heating oil and gasoline are rationed. Agriculture has suffered from the war, land reform, and shortages of equipment and materials. The five-year plan seeks to reinvigorate the economy by increasing the role of the private sector, boosting nonoil income, and securing foreign loans. The plan is overly ambitious but probably will generate some short-term relief.

Disputes: Iran and Iraq restored diplomatic relations on 14 October 1990 following the end of the war that began on 22 September 1980; progress had been made on the major issues of contention--troop withdrawal, prisoner-of-war exchanges, demarcation of the border, freedom of navigation, and sovereignty over the Shatt al Arab waterway--but written agreements had yet to be drawn up when frictions
reemerged in March 1991 in the wake of Shia and Kurdish revolts in Iraq that Baghdad accused Tehran of supporting; Kurdish question among Iran, Iraq, Syria, Turkey, and the USSR; shares Neutral Zone with Saudi Arabia—in December 1981, Iraq and Saudi Arabia signed a boundary agreement that divides the zone between them, but the agreement must be ratified before it becomes effective; Iraqi forces invaded and occupied Kuwait from 2 August 1990 until 27 February 1991; in April 1991 official Iraqi acceptance of UN Security Council Resolution 687, which demands that Iraq accept its internationally recognized border with Kuwait, ended earlier claims to Bubiyan and Warbah Islands or to all of Kuwait; periodic disputes with upstream riparian Syria over Euphrates water rights; potential dispute over water development plans by Turkey for the Tigris and Euphrates Rivers

**Economy**

**Overview:** The Bathist regime engages in extensive central planning and management of industrial production and foreign trade while leaving some small-scale industry and services and most agriculture to private enterprise. The economy has been dominated by the oil sector, which has provided about 95% of foreign exchange earnings. In the 1980s financial problems, caused by massive expenditures in the eight-year war with Iran and damage to oil export facilities by Iran, led the government to implement austerity measures and to borrow heavily and later reschedule foreign debt payments. After the end of hostilities in 1988, oil exports gradually increased with the construction of new pipelines and restoration of damaged facilities. Agricultural development remained hampered by labor shortages, salinization, and dislocations caused by previous land reform and collectivization programs. The industrial sector, although accorded high priority by the government, also was under financial constraints. Iraq's seizure of Kuwait in August 1990, subsequent international economic embargoes, and military actions by an international coalition beginning in January 1991 drastically changed the economic picture. Oil exports were cut to near zero, and industrial and transportation facilities severely damaged.

**GNP:** $35 billion, per capita $1,940; real growth rate 5%
(1989 est.)

### Inflation rate (consumer prices): 30-40% (1989 est.)

### Unemployment rate: less than 5% (1989 est.)

*_Economy
**Overview:** The economy is small, open, and trade dependent. Agriculture, once the most important sector, is now dwarfed by industry, which accounts for 37% of GDP and about 80% of exports and employs 26% of the labor force. The government has successfully reduced the rate of inflation from double-digit figures in the late 1970s to 3.3% in 1990. In 1987, after years of deficits, the balance of payments was brought into the black. Unemployment, however, is a serious problem. A 1990 unemployment rate of 16.6% placed Ireland along with Spain as the countries with the worst jobless records in Western Europe.

**GDP:** $33.9 billion, per capita $9,690; real growth rate 4.1% (1990)

**Inflation rate (consumer prices):** 3.3% (1990)

**Unemployment rate:** 16.6% (1990)

**Budget:** revenues $11.3 billion; expenditures $11.7 billion, including capital expenditures of $1.6 billion (1990)

**Exports:** $24.6 billion (f.o.b., 1990);

commodities—chemicals, data processing equipment, industrial machinery, live animals, animal products;
partners--EC 74% (UK 34%, FRG 11%, France 10%), US 8%

# Imports: $20.7 billion (C.I.F., 1990);

commodities--food, animal feed, chemicals, petroleum and petroleum products, machinery, textiles, clothing;

partners--EC 66% (UK 41%, FRG 9%, France 4%), US 16%

# External debt: $16.0 billion (1990)

# Industrial production: growth rate 4.7% (1990); accounts for 37% of GDP

# Electricity: 4,957,000 kW capacity; 14,480 million kWh produced, 4,080 kWh per capita (1989)

# Industries: food products, brewing, textiles, clothing, chemicals, pharmaceuticals, machinery, transportation equipment, glass and crystal

# Agriculture: accounts for 10% of GNP and 15% of the labor force; principal crops--turnips, barley, potatoes, sugar beets, wheat; livestock--meat and dairy products; 85% self-sufficient in food; food
shortages include bread grain, fruits, vegetables

_Economic aid: donor--ODA commitments (1980-89), $90 million

Israel

(also see separate Gaza Strip and West Bank entries)

Note: The Arab territories occupied by Israel since the 1967 war are not included in the data below. As stated in the 1978 Camp David Accords and reaffirmed by President Reagan's 1 September 1982 peace initiative, the final status of the West Bank and Gaza Strip, their relationship with their neighbors, and a peace treaty between Israel and Jordan are to be negotiated among the concerned parties. The Camp David Accords further specify that these negotiations will resolve the location of the respective boundaries. Pending the completion of this process, it is US policy that the final status of the West Bank and Gaza Strip has yet to be determined (see West Bank and Gaza Strip entries). On 25 April 1982 Israel relinquished control of the Sinai to Egypt. Statistics for the Israeli-occupied Golan Heights are included in the Syria entry.

_Economy_

_Overview:_ Israel has a market economy with substantial government participation. It depends on imports for crude oil, food, grains, raw materials, and military equipment. Despite limited natural resources, Israel has developed its agricultural and industrial sectors on an intensive scale over the past 20 years. Industry accounts for about 23% of the labor force, agriculture for 5%, and services for most of the balance. Diamonds, high-technology machinery, and agricultural products
(fruits and vegetables) are the biggest export earners. The balance of payments has traditionally been negative, but is offset by large transfer payments and foreign loans. About half of Israel's $18 billion external government debt is owed to the US, which is its major source for economic and military aid. To earn needed foreign exchange, Israel must continue to exploit high-technology niches in the international market, such as medical scanning equipment. Iraq's invasion of Kuwait on 2 August dealt a blow to Israel's economy in 1990. Higher world oil prices added an estimated $300 million to Israel's 1990 oil import bill, and helped keep the inflation rate at 18% for the year. Regional tensions and continuing acts of the Palestinian uprising (intifadah)-related violence contributed to a sharp dropoff in tourism--a key source of foreign exchange--to the lowest level since the 1973 Arab-Israeli war. In 1991, the influx of up to 400,000 Soviet immigrants will increase unemployment, intensify the country's housing crisis, and contribute to a widening budget deficit.

Economy

Overview: Since World War II the economy has changed from one based on agriculture into a ranking industrial economy, with approximately the same total and per capita output as France and the UK. The country is still divided into a developed industrial north, dominated by small private companies, and an undeveloped agricultural south, dominated by large public enterprises. Services account for 48% of GDP, industry 34%, agriculture 4%, and public administration 13%. Most raw materials needed by industry and over 75% of energy requirements must be imported. The economic recovery that began in mid-1983 has continued through 1990, with the economy growing at an annual average rate of 3%. For the 1990s, Italy faces the problems of refurbishing a tottering communications system, curbing pollution in major industrial centers, and adjusting to the new competitive forces accompanying the ongoing economic integration of the European Community.

Economy

Overview: Ivory Coast is among the world's largest producers and exporters of coffee, cocoa beans, and palm-kernel oil. Consequently, the economy is highly sensitive to fluctuations in international prices for coffee and cocoa and to weather conditions. Despite attempts by the government to diversify, the economy is still largely dependent on agriculture and related industries. The agricultural sector accounts for over one-third of GDP and about 80% of export earnings and employs about 85% of the labor force. A collapse of world cocoa and coffee prices in 1986 threw the economy into a recession, from which the country had not recovered by 1990.
GDP: $10 billion, per capita $800; real growth rate - 2.9% (1990)

Economy

Overview: The economy is based on sugar, bauxite, and tourism.
In 1985 it suffered a setback with the closure of some facilities in the bauxite and alumina industry, a major source of hard currency earnings.
Since 1986 an economic recovery has been under way. In 1987 conditions
began to improve for the bauxite and alumina industry because of increases in world metal prices. The recovery has also been supported by growth in the manufacturing and tourism sectors. In September 1988, Hurricane Gilbert inflicted severe damage on crops and the electric power system, a sharp but temporary setback to the economy. By October 1989 the economic recovery from the hurricane was largely complete and real growth was up about 3% for 1989. In 1990, 3.5% economic growth was led by mining and tourism.

Economy

Overview: Although Japan has few natural resources, since 1971 it has become the world's third-largest economy, ranking behind only the US and the USSR. Government-industry cooperation, a strong work ethic, and a comparatively small defense allocation have helped Japan advance rapidly, notably in high-technology fields. Industry, the most important sector of the economy, is heavily dependent on imported raw materials and fuels. Self-sufficient in rice, Japan must import 50% of its requirements for other grain and fodder crops. Japan maintains one of the world's largest fishing fleets and accounts for nearly 15% of the global catch. Overall economic growth has been spectacular: a 10% average in the 1960s, a 5% average in the 1970s and 1980s. In 1990 strong investment and consumption spending helped maintain growth at 5.6%. Inflation remains low at 3.1% despite higher oil prices and rising wages because of a tight labor market. Japan continues to run a huge trade surplus, $52 billion in 1990, which supports extensive investment in foreign properties.

GNP: $2,115.2 billion, per capita $17,100; real growth rate 5.6% (1990)

Inflation rate (consumer prices): 3.1% (1990)
Unemployment rate: 2.1% (1990)

Budget: revenues $499 billion; expenditures $532 billion, including capital expenditures (public works only) of $52 billion (FY90)

Exports: $286.5 billion (f.o.b., 1990);

commodities—manufactures 97% (including machinery 38%, motor vehicles 17%, consumer electronics 10%);

partners—US 31%, Southeast Asia 29%, Western Europe 21%, Communist countries 3%, Middle East 3%

Imports: $234.7 billion (c.i.f., 1990);

commodities—manufactures 50%, fossil fuels 24%, foodstuffs and raw materials 26%;

partners—Southeast Asia 23%, US 23%, Western Europe 18%, Middle East 13%, Communist countries 7%

External debt: $NA
Industrial production: growth rate 4.6% (1990 est.); accounts for 30% of GDP (mining and manufacturing)

Electricity: 191,000,000 kW capacity; 790,000 million kWh produced, 6,390 kWh per capita (1989)

Industries: metallurgy, engineering, electrical and electronic, textiles, chemicals, automobiles, fishing, telecommunications

Agriculture: accounts for only 2% of GNP; highly subsidized and protected sector, with crop yields among highest in world; principal crops--rice, sugar beets, vegetables, fruit; animal products include pork, poultry, dairy and eggs; about 50% self-sufficient in food production; shortages of wheat, corn, soybeans; world's largest fish catch of 11.9 million metric tons in 1988

Economic aid: donor--ODA and OOF commitments (1970-89), $83.2 billion; ODA outlay of $7.9 billion in 1989

Currency: yen (plural--yen); 1 yen (3) = 100 sen

Economy
Overview: The economy is based largely on financial services, agriculture, and tourism. Potatoes, cauliflower, tomatoes, and especially flowers are important export crops, shipped mostly to the UK. The Jersey breed of dairy cattle is known worldwide and represents an important export earner. Milk products go to the UK and other EC countries. In 1986 the finance sector overtook tourism as the main contributor to GDP, accounting for 40% of the island's output. In recent years the government has encouraged light industry to locate in Jersey, with the result that an electronics industry has developed alongside the traditional manufacturing of knitwear. All raw material and energy requirements are imported, as well as a large share of Jersey's food needs.

@ Jordan

(see separate West Bank entry)

Note: The war between Israel and the Arab states in June 1967 ended with Israel in control of the West Bank. As stated in the 1978 Camp David Accords and reaffirmed by President Reagan's 1 September 1982 peace initiative, the final status of the West Bank and Gaza Strip, their relationship with their neighbors, and a peace treaty between Israel and Jordan are to be negotiated among the concerned parties. The Camp David Accords further specify that these negotiations will resolve the location of the respective boundaries. Pending the completion of this process, it is US policy that the final status of the West Bank and Gaza Strip has yet to be determined.

_Economy_

__Overview:__ Jordan was a secondary beneficiary of the oil boom of the late 1970s and early 1980s, when its annual GNP growth averaged 10-12%. Recent years, however, have witnessed a sharp reduction in grant aid from Arab oil-producing countries and a dropoff in worker remittances, with national growth averaging 1-2%. Imports--mainly oil, capital goods, consumer durables, and foodstuffs--have been outstripping exports by roughly $2 billion annually, the difference being made up by aid, remittances, and borrowing. In mid-1989, the Jordanian Government agreed to implement an IMF austerity program designed to tackle the country's serious economic problems. The program sought to gradually reduce the government's budget deficit over the next several years and implement badly needed structural reforms in the economy. In return for agreeing to the IMF program, Jordan was granted IMF standby loans of over $100 million. Recognizing that it would be unable to cover its debt obligations, the government also began debt rescheduling negotiations with creditors in mid-1989. The onset of the Gulf crisis in August 1990 forced the government to shelve the IMF program and suspend most debt payments and rescheduling negotiations. Economic prospects for 1991 are especially gloomy, given the unsettled conditions in the Middle East.

* Economy

# Overview: The country has few national resources. Commercially
viable phosphate deposits were exhausted at the time of independence
in 1979. Copra and fish now represent the bulk of production and exports.

The economy has fluctuated widely in recent years. Real GDP declined about 8% in 1987, as the fish catch fell sharply to only one-fourth the level of 1986 and copra production was hampered by repeated rains. Output rebounded strongly in 1988, with real GDP growing by 17%. The upturn in economic growth came from an increase in copra production and a good fish catch. Following the strong surge in output in 1988, GNP increased 1% in 1989 and again in 1990.

**GDP:** $36.8 million, per capita $525; real growth rate 1.0% (1990 est.)

**Inflation rate (consumer prices):** 4.0% (1990 est.)

**Unemployment rate:** 2% (1985); considerable underemployment

**Budget:** revenues $29.9 million; expenditures $16.3 million, including capital expenditures of $14.0 million (1990 est.)

**Exports:** $5.8 million (f.o.b., 1990 est.);

commodities--fish 55%, copra 42%;

partners--EC 20%, Marshall Islands 12%, US 8%, American
Samoa 4% (1985)

_Imports_: $26.7 million (c.i.f., 1990 est.);

commodities--foodstuffs, fuel, transportation equipment;

partners--Australia 39%, Japan 21%, NZ 6%, UK 6%, US 3% (1985)

_External debt_: $2.0 million (December 1989 est.)

_Industrial production_: growth rate 0.0% (1988 est.); accounts
for less than 4% of GDP

_Electricity_: 5,000 kW capacity; 13 million kWh produced,
190 kWh per capita (1990)

_Industries_: fishing, handicrafts

_Agriculture_: accounts for 30% of GDP (including fishing); copra
and fish contribute about 95% to exports; subsistence farming
predominates; food crops--taro, breadfruit, sweet potatoes, vegetables;
not self-sufficient in food

Economy
Overview: More than 90% of this command economy is socialized; agricultural land is collectivized; and state-owned industry produces 95% of manufactured goods. State control of economic affairs is unusually tight even for a Communist country because of the small size and homogeneity of the society and the strict one-man rule of Kim. Economic growth during the period 1984-90 averaged approximately 3%. Abundant
natural resources and hydropower form the basis of industrial
development. Output of the extractive industries includes coal, iron ore,
magnesite, graphite, copper, zinc, lead, and precious metals.
Manufacturing emphasis is centered on heavy industry, with light industry
lagging far behind. Despite the use of high-yielding seed varieties,
expansion of irrigation, and the heavy use of fertilizers, North Korea
has not yet become self-sufficient in food production. Four consecutive
years of poor harvests, coupled with distribution problems, have led to
chronic food shortages. North Korea remains far behind South Korea in
economic development and living standards.

_economy

_Overview: The driving force behind the economy's dynamic growth
has been the planned development of an export-oriented economy in a
vigorously entrepreneurial society. Real GNP—which grew by 6.7% in 1989
after an average annual growth of over 12% between 1986-88—grew about
9% in 1990. Labor unrest—which led to substantial wage hikes in
1987-88—was noticeably calmer in 1990, unemployment averaged a low
2.5%, and investment was strong. Inflation rates, however, are beginning
to challenge South Korea's strong economic performance. Consumer prices
rose 8.6%, the highest rate in nine years. Policymakers are concerned
higher prices could lead to a resurgence of labor unrest.

_GNP: $238 billion, per capita $5,600; real growth rate 9% (1990

Economy

Overview: Up to the invasion by Iraq in August 1990, the oil
sector had dominated the economy. Kuwait has the third-largest oil reserves in the world after Saudi Arabia and Iraq. Earnings from hydrocarbons generated over 90% of both export and government revenues and contributed about 40% to GDP. Most of the nonoil sector has traditionally been dependent upon oil-derived government revenues. Iraq's destruction of Kuwait's oil industry during the Gulf war has devastated the economy. Iraq destroyed or damaged more than 80% of Kuwait's 950 operating oil wells, as well as sabotaging key surface facilities. Western firefighters had brought about 140 of the 600 oil well fires and blowouts under control as of early June 1991. It could take two to three years to restore Kuwait's oil production to its prewar level of about 2.0 million barrels per day.

Economy

Overview: One of the world's poorest nations, Laos has had a
Communist centrally planned economy with government ownership and control of productive enterprises of any size. Recently, however, the government has been decentralizing control and encouraging private enterprise.

Laos is a landlocked country with a primitive infrastructure, that is, it has no railroads, a rudimentary road system, limited external and internal telecommunications, and electricity available in only a limited area. Subsistence agriculture is the main occupation, accounting for over 60% of GDP and providing about 85-90% of total employment. The predominant crop is rice. For the foreseeable future the economy will continue to depend for its survival on foreign aid from the IMF and other international sources; foreign aid from the USSR and Eastern Europe is being cut sharply.

Government

Note: Between early 1975 and late 1976 Lebanon was torn by civil war between its Christians--then aided by Syrian troops--and its Muslims and their Palestinian allies. The cease-fire established in October 1976 between the domestic political groups generally held for about six years, despite occasional fighting. Syrian troops constituted as the Arab Deterrent Force by the Arab League have remained in Lebanon. Syria's move toward supporting the Lebanese Muslims and the Palestinians and Israel's growing support for Lebanese Christians brought the two sides into rough equilibrium, but no progress was made toward national reconciliation or political reforms--the original cause of the war.

Continuing Israeli concern about the Palestinian presence in Lebanon led to the Israeli invasion of Lebanon in June 1982. Israeli forces occupied all of the southern portion of the country and mounted a summer-long siege of Beirut, which resulted in the evacuation of the PLO from Beirut in September under the supervision of a multinational force (MNF) made up of US, French, and Italian troops.

Within days of the departure of the MNF, Lebanon's newly elected
president, Bashir Gemayel, was assassinated. In the wake of his death, Christian militiamen massacred hundreds of Palestinian refugees in two Beirut camps. This prompted the return of the MNF to ease the security burden on Lebanon's weak Army and security forces. In late March 1984 the last MNF units withdrew.

Lebanese Parliamentarians met in Taif, Saudi Arabia in late 1989 and concluded a national reconciliation pact that codified a new power-sharing formula, specifying a Christian president but giving Muslims more authority. Rene Muawad was subsequently elected president on 4 November 1989, ending a 13-month period during which Lebanon had no president and rival Muslim and Christian governments. Muawad was assassinated 17 days later, on 22 November; on 24 November Ilyas Harawi was elected to succeed Muawad.

In October 1990, the chances for ending the 16 year old civil war and implementing Ta'if were markedly improved when Syrian and Lebanese forces ousted renegade Christian General Awn from his stronghold in East Beirut. Awn had defied the legitimate government and established a separate mini-state within East Beirut after being appointed acting Prime Minister by outgoing President Gemayel in 1988. Awn and his supporters feared Ta'if would diminish Christian power in Lebanon and increase the influence of Syria.

Since the removal of Awn, the Lebanese Government has reunited the capital city and implemented a phased plan to disarm the militias
and gradually reestablish authority throughout Lebanon. The army has deployed from Beirut north along the coast road to Tripoli, southeast into the Shuf mountains, and south to the vicinity of Sidon. Many militiamen from Christian and Muslim groups have evacuated Beirut for their strongholds in the north, south, and east of the country. Some heavy weapons possessed by the militias have been turned over to the government, which has begun a plan to integrate some militiamen into the military and the internal security forces.

Lebanon and Syria signed a treaty of friendship and cooperation in May 1991. Lebanon continues to be partially occupied by Syrian troops, which are deployed in East and West Beirut, its southern suburbs, the Bekaa Valley, and throughout northern Lebanon.

Iran also maintains a small contingent of revolutionary guards in the Bekaa Valley and South Lebanon to support Lebanese Islamic fundamentalist groups.

Israel withdrew the bulk of its forces from the south in 1985, although it still retains troops in a 10-km-deep security zone north of its border with Lebanon. Israel arms and trains the Army of South Lebanon (ASL), which also occupies the security zone and is Israel's first line of defense against attacks on its northern border.

The following description is based on the present constitutional and customary practices of the Lebanese system.
Type: republic

Capital: Beirut

Economy

Overview: Since 1975 civil war has seriously damaged Lebanon’s economic infrastructure, disrupted economic activity, and all but ended Lebanon’s position as a Middle Eastern entrepot and banking hub. Following October 1990, however, a tentative peace has enabled the central government to begin restoring control in Beirut, collect taxes, and regain access to key port and government facilities. The battered economy has also been propped up by a financially sound banking system and resilient small- and medium-scale manufacturers. Family remittances, foreign financial support to political factions, the narcotics trade, and international emergency aid are main sources of foreign exchange. Economic prospects for 1991 have brightened, particularly if the Syrian-backed government is able to maintain law and order and reestablish business confidence. Rebuilding war-ravaged Beirut is likely to provide a major stimulus to the Lebanese economy in 1991.

Economy

Overview: Small, landlocked, and mountainous, Lesotho has no important natural resources other than water. Its economy is based on agriculture, light manufacturing, and remittances from laborers employed in South Africa ($153 million in 1989). The great majority of households gain their livelihoods from subsistence farming and migrant labor. Manufacturing depends largely on farm products to support the milling, canning, leather, and jute industries; other industries include textile,
clothing, and light engineering. Industry's share of GDP rose from 6% in 1982 to 15% in 1989. Political and economic instability in South Africa raise uncertainties for Lesotho's economy, especially with respect to migrant worker remittances--over one-third of GDP.

#_Economy
#_Overview: Civil war during 1990 destroyed much of Liberia's
economy, especially the infrastructure in and around Monrovia. Expatriate
businessmen fled the country, taking capital and expertise with them.
Many will not return. Richly endowed with water, mineral resources, forests, and a climate favorable to agriculture, Liberia had been a producer and exporter of basic products, while local manufacturing, mainly foreign owned, had been small in scope. Political instability threatens prospects for economic reconstruction and repatriation of some 750,000 Liberian refugees who fled to neighboring countries.

_*_Economy

_#_Overview: The socialist-oriented economy depends primarily upon
revenues from the oil sector, which contributes practically all export
earnings and about one-third of GNP. Since 1980, however, the sharp
drop in oil prices and the resulting decline in export revenues have
adversely affected economic development. In 1988 per capita GNP was the
highest in Africa at $5,410, but it had been $2,000 higher in 1982.
Severe cutbacks in imports over the past five years have led to shortages
of basic goods and foodstuffs, although the reopening of the
Libyan-Tunisian border in April 1988 and the Libyan-Egyptian border in
December 1989 have somewhat eased shortages. Austerity budgets and a lack
of trained technicians have undermined the government's ability to
implement a number of planned infrastructure development projects.
Windfall profits from the hike in world oil prices in late 1990 improved the foreign payments position and may permit Tripoli to ease austerity measures. The nonoil industrial and construction sectors, which account for about 22% of GDP, have expanded from processing mostly agricultural products to include petrochemicals, iron, steel, and aluminum. Although agriculture accounts for less than 5% of GNP, it employs 18% of the labor force. Climatic conditions and poor soils severely limit farm output, requiring Libya to import about 75% of its food requirements.

Economy

Overview: The prosperous economy is based primarily on small-scale light industry and tourism. Industry accounts for 54% of total employment, the service sector 42% (mostly based on tourism), and agriculture and forestry 4%. The sale of postage stamps to collectors is estimated at $10 million annually. Low business taxes (the maximum tax rate is 20%) and easy incorporation rules have induced about 25,000 holding or so-called letter box companies to establish nominal offices in Liechtenstein. Such companies, incorporated solely for tax purposes, provide 30% of state revenues. The economy is tied closely to that of Switzerland in a customs union, and incomes and living standards parallel those of the more prosperous Swiss groups.

/Economy

/Overview: The stable economy features moderate growth, low inflation, and negligible unemployment. Agriculture is based on small but highly productive family-owned farms. The industrial sector, until
recently dominated by steel, has become increasingly more diversified, particularly toward high-technology firms. During the past decade, growth in the financial sector has more than compensated for the decline in steel. Services, especially banking, account for a growing proportion of the economy. Luxembourg participates in an economic union with Belgium on trade and most financial matters and is also closely connected economically to the Netherlands.

Economy

Overview: Madagascar is one of the poorest countries in the world. 
During the period 1980-85 it had a population growth of 3% a year and 
a 0.4% GDP growth rate. Agriculture, including fishing and forestry, is 
the mainstay of the economy, accounting for over 40% of GDP, employing 
about 80% of the labor force, and contributing to more than 70% of total 
export earnings. Industry is largely confined to the processing of 
agricultural products and textile manufacturing; in 1990 it accounted for 
only 16% of GDP and employed 3% of the labor force. In 1986 the 
government introduced a five-year development plan that stresses 
self-sufficiency in food (mainly rice) by 1990, increased production for
exports, and reduced energy imports.

Economy

Overview: A landlocked country, Malawi ranks among the world's least developed with a per capita GDP of $175. The economy is predominately agricultural and operates under a relatively free enterprise environment, with about 90% of the population living in rural areas. Agriculture accounts for 40% of GDP and 90% of export revenues. After two years of weak performance, economic growth improved significantly in 1988-90 as a result of good weather and a broadly based economic adjustment effort by the government. The economy depends on substantial inflows of economic assistance from the IMF, the World Bank, and individual donor nations. The closure of traditional trade routes through Mozambique continues to be a constraint on the economy.

GDP: $1.6 billion, per capita $175; growth rate 4.8% (1990 est.)

Inflation rate (consumer prices): 11.7% (1990)

Unemployment rate: NA%

Budget: revenues $398 million; expenditures $510 million, including capital expenditures of $154 million (FY91 est.)

Exports: $390 million (f.o.b., 1990 est.);
commodities--tobacco, tea, sugar, coffee, peanuts;

partners--US, UK, Zambia, South Africa, FRG

Imports: $560 million (c.i.f., 1990 est.);

commodities--food, petroleum, semimanufactures, consumer goods,
transportation equipment;

partners--South Africa, Japan, US, UK, Zimbabwe

External debt: $1.4 billion (December 1990 est.)

Industrial production: growth rate 4.9% (1989 est.); accounts for about 18% of GDP (1988)

Electricity: 181,000 kW capacity; 535 million kWh produced,
60 kWh per capita (1989)

Industries: agricultural processing (tea, tobacco, sugar),
sawmilling, cement, consumer goods

Agriculture: accounts for 40% of GDP; cash crops--tobacco,
sugarcane, cotton, tea, and corn; subsistence crops--potatoes, cassava, sorghum, pulses; livestock--cattle and goats

*_*Economy

**Overview:** In 1988-90 booming exports helped Malaysia continue to recover from the severe 1985-86 recession. Real output grew by 8.8% in 1989 and 10% in 1990, helped by vigorous growth in manufacturing output, further increases in foreign direct investment, particularly from Japanese and Taiwanese firms facing higher costs at home, and increased oil production in 1990. Malaysia has become the world's third-largest producer of semiconductor devices (after the US and Japan) and the world's largest exporter of semiconductor devices. Inflation remained low as unemployment stood at 6% of the labor force and as the government followed prudent fiscal/monetary policies. The country is not self-sufficient in food, and some of the rural population subsists at the poverty level. Malaysia's high export dependence leaves it vulnerable to a recession in the OECD countries or a fall in world commodity prices.

**GDP:** $43.1 billion, per capita $2,460; real growth rate 10% (1990)

**Inflation rate (consumer prices):** 3.1% (1990 est.)

_Economy

_Overview: The economy is based on fishing, tourism, and shipping.
Agriculture is limited to the production of a few subsistence crops that
provide only 10% of food requirements. Fishing is the largest industry,
employing 25% of the work force and accounting for over 60% of exports; it is also an important source of government revenue. During the 1980s tourism has become one of the most important and highest growth sectors of the economy. In 1988 industry accounted for about 5% of GDP. Real GDP is officially estimated to have increased by about 10% annually during the period 1974-87, and GDP estimates for 1988 show a further growth of 9% on the strength of a record fish catch and an improved tourist season.

__Economy
__Overview: Significant resources are limestone, a favorable
geographic location, and a productive labor force. Malta produces only
about 20% of its food needs, has limited freshwater supplies, and has no
domestic energy sources. Consequently, the economy is highly dependent on
foreign trade and services. Manufacturing and tourism are the largest
contributors to the economy. Manufacturing accounts for about 27% of GDP,
with the electronics and textile industries major contributors. In 1989
inflation was held to a low 0.9%. Per capita GDP at $5,500 places Malta
in the middle-income range of the world’s nations.

__GDP: $1.9 billion, per capita $5,500 (1988); real growth rate 6.4%

*Economy
__Overview: Offshore banking, manufacturing, and tourism are key
sectors of the economy. The government's policy of offering incentives to
high-technology companies and financial institutions to locate on the
island has paid off in expanding employment opportunities in high-income
industries. As a result, agriculture and fishing, once the mainstays of
the economy, have declined in their shares of GNP. Banking now
contributes over 20% to GNP and manufacturing about 15%. Trade is mostly
with the UK.

_*_. Economy

_#. Overview: Agriculture and tourism are the mainstays of the economy.
Agricultural production is concentrated on small farms, and the most
important commercial crops are coconuts, tomatoes, melons, and
breadfruit. A few cattle ranches supply the domestic meat market.
Small-scale industry is limited to handicrafts, fish processing, and
copra. The tourist industry is the primary source of foreign exchange and
employs about 10% of the labor force. The islands have few natural
resources, and imports far exceed exports. In 1987 the US Government provided grants of $40 million out of the Marshallese budget of $55 million.

_GDP: $63 million, per capita $1,500; real growth rate NA% (1989 est.)

*Economy

Overview: The economy is based on sugarcane, bananas, tourism, and light industry. Agriculture accounts for about 12% of GDP and the small industrial sector for 10%. Sugar production has declined, with most of the sugarcane now used for the production of rum. Banana exports are increasing, going mostly to France. The bulk of meat, vegetable, and grain requirements must be imported, contributing to a chronic trade deficit that requires large annual transfers of aid from France. Tourism has become more important than agricultural exports as a source of foreign exchange. The majority of the work force is employed in the service sector and in administration. In 1986 per capita GDP was relatively high at $6,000. During 1986 the unemployment rate was 30% and was particularly severe among younger workers.
GDP: $2.0 billion, per capita $6,000; real growth rate NA% (1986)

Inflation rate (consumer prices): 2.9% (1989)

Unemployment rate: 30% (1986)

Budget: revenues $268 million; expenditures $268 million, including capital expenditures of $NA (1989 est.)

Exports: $196 million (f.o.b., 1988);
commodities--refined petroleum products, bananas, rum, pineapples;
partners--France 65%, Guadeloupe 24%, FRG (1987)

Imports: $1.3 billion (c.i.f., 1988);
commodities--petroleum products, foodstuffs, construction materials, vehicles, clothing and other consumer goods;
partners--France 65%, UK, Italy, FRG, Japan, US (1987)

_*_ Economy

_#_ Overview: A majority of the population still depends on agriculture and livestock for a livelihood, even though most of the nomads and many
subsistence farmers were forced into the cities by recurrent droughts in the 1970s and 1980s. Mauritania has extensive deposits of iron ore that account for almost 50% of total exports. The decline in world demand for this ore, however, has led to cutbacks in production. The nation's coastal waters are among the richest fishing areas in the world, but overexploitation by foreigners threatens this key source of revenue. The country's first deepwater port opened near Nouakchott in 1986. In recent years, the droughts, the conflict with Senegal, rising energy costs, and economic mismanagement have resulted in a substantial buildup of foreign debt. The government now has begun the second stage of an economic reform program in consultation with the World Bank, the IMF, and major donor countries.

_Economy

_Overview: Mexico's economy is a mixture of state-owned industrial plants (notably oil), private manufacturing and services, and both large-scale and traditional agriculture. In the 1980s Mexico experienced severe economic difficulties: the nation accumulated large external debts as world petroleum prices fell; rapid population growth outstripped the domestic food supply; and inflation, unemployment, and pressures to emigrate became more acute. Growth in national output, however, appears to be recovering, rising from 1.4% in 1988 to 3.9% in 1990. The US is Mexico's major trading partner, accounting for two-thirds of its exports and imports. After petroleum, border assembly plants and tourism are the largest earners of foreign exchange. The government, in consultation with international economic agencies, is implementing programs to stabilize the economy and foster growth. In 1991 the government also plans to begin negotiations with the US and Canada on a free trade agreement.

_GDP: $236 billion, per capita $2,680; real growth rate 3.9% (1990)
Inflation rate (consumer prices): 30% (1990)

Unemployment rate: 15-18% (1990 est.)

Budget: revenues $44.3 billion; expenditures $55.2 billion, including capital expenditures of $7.8 billion (1989)

Exports: $26.8 billion (f.o.b., 1990);
commodities--crude oil, oil products, coffee, shrimp, engines, cotton;
partners--US 66%, EC 16%, Japan 11%

Imports: $29.8 billion (c.i.f., 1990);
commodities--grain, metal manufactures, agricultural machinery, electrical equipment;
partners--US 62%, EC 18%, Japan 10%

External debt: $96.0 billion (1990)
Industrial production: growth rate 5.3% (1989); accounts for 27% of GDP

Electricity: 27,600,000 kW capacity; 108,976 million kWh produced, 1,240 kWh per capita (1990)

Industries: food and beverages, tobacco, chemicals, iron and steel, petroleum, mining, textiles, clothing, transportation equipment, tourism

Agriculture: accounts for 9% of GDP and over 25% of work force; large number of small farms at subsistence level; major food crops--corn, wheat, rice, beans; cash crops--cotton, coffee, fruit, tomatoes; fish catch of 1.4 million metric tons among top 20 nations (1987)

Illicit drugs: illicit cultivation of opium poppy and cannabis continues in spite of government eradication efforts; major link in chain of countries used to smuggle cocaine from South American dealers to US markets

Economic aid: US commitments, including Ex-Im (FY70-89), $3.1 billion; Western (non-US) countries, ODA and OOF bilateral commitments (1970-89), $7.1 billion; Communist countries (1970-89), $110 million

Currency: Mexican peso (plural--pesos);
1 Mexican peso (Mex$) = 100 centavos

**Economy**

**Overview:** Financial assistance from the US is the primary source of revenue, with the US pledged to spend $1 billion in the islands in the 1990s; also in December 1990 the US authorized the use of disaster relief funds for Micronesia because of damage from Typhoon Russ.

In addition Micronesia earns about $4 million a year in fees from foreign commercial fishing concerns. Economic activity consists primarily of subsistence farming and fishing. The islands have few mineral deposits worth exploiting, except for high-grade phosphate. The potential for a tourist industry exists, but the remoteness of the location and a lack of adequate facilities hinder development.

Economy

Overview: Monaco, situated on the French Mediterranean coast, is a popular resort, attracting tourists to its casino and pleasant climate. The Principality has successfully sought to diversify into services and small, high-value-added, non-polluting industries. The state has no income tax and low business taxes and thrives as a tax haven both for individuals who have established residence and for foreign companies that have set up businesses and offices. About 50% of Monaco's annual revenue
comes from value-added taxes on hotels, banks, and the industrial sector; about 25% of revenue comes from tourism. Living standards are high, that is, roughly comparable to those in prosperous French metropolitan suburbs.

Economy

Overview: Economic activity traditionally has been based on agriculture and the breeding of livestock—Mongolia has the highest number of livestock per person in the world. In recent years extensive mineral resources have been developed with Soviet support. The mining and processing of coal, copper, molybdenum, tin, tungsten, and gold account for a large part of industrial production. In early 1991 the Mongolian leadership was struggling with severe economic dislocations, mainly attributable to chaotic economic conditions in the USSR, by far Mongolia's leading trade and development partner. For example, the government doubled most prices in January 1991, and industrial production dropped 10% in the first quarter of 1991. Moscow almost certainly will be cutting aid in 1991.

GDP: $2.2 billion, per capita $1,000 (1990 est.); real growth rate NA%

Inflation rate (consumer prices): NA%
Unemployment rate: 10% (February 1991)

Budget: deficit of $240 million (1991 est.)

Exports: $784 million (f.o.b., 1988);
commodities—livestock, animal products, wool, hides, fluorspar, nonferrous metals, minerals;
partners—nearly all trade with Communist countries (about 80% with USSR)

Imports: $1.14 billion (f.o.b., 1988);
commodities—machinery and equipment, fuels, food products, industrial consumer goods, chemicals, building materials, sugar, tea;
partners—nearly all trade with Communist countries (about 80% with USSR)

External debt: $16.8 billion (yearend 1990); 98.6% with USSR

Industrial production: growth rate NA%
Electricity: 657,000 kW capacity; 2,950 million kWh produced, 1,380 kWh per capita (1990)

Industries: copper, processing of animal products, building materials, food and beverage, mining (particularly coal)

Agriculture: accounts for about 20% of GDP and provides livelihood for about 50% of the population; livestock raising predominates (sheep, goats, horses); crops--wheat, barley, potatoes, forage

Economic aid: about $300 million in trade credits and $34 million in grant aid from USSR and other CEMA countries, plus $7.4 million from UNDP (1990)

**Economy**

*Overview: The economy recovered moderately in 1990 because of the resolution of a trade dispute with India over phosphoric acid sales, a rebound in textile sales to the EC, and lower prices for food imports. In addition, a dramatic increase in worker remittances, increased Arab donor aid, and generous debt rescheduling agreements helped ease foreign payments pressures. On the down side, higher oil import costs fueled inflation. Servicing the $21 billion foreign debt, high unemployment, and Morocco’s vulnerability to external forces remain severe problems for the 1990s.

_GDP: $25.4 billion, per capita $990; real growth rate 2.5% (1990 est.)

_Inflation rate (consumer prices): 6.6% (1990 est.)

Economy

Overview: One of Africa's poorest countries, with a per capita GDP of little more than $100, Mozambique has failed to exploit the economic potential of its sizable agricultural, hydropower, and transportation resources. Indeed, national output, consumption, and investment declined throughout the first half of the 1980s because of internal disorders, lack of government administrative control, and a growing foreign debt.
A sharp increase in foreign aid, attracted by an economic reform policy, has resulted in successive years of economic growth since 1985. Agricultural output, nevertheless, is at about only 75% of its 1981 level, and grain has to be imported. Industry operates at only 20-40% of capacity. The economy depends heavily on foreign assistance to keep afloat.

_Economy

Overview: The economy is heavily dependent on the mining industry
to extract and process minerals for export. Mining accounts for almost
30% of GDP. Namibia is the fourth-largest exporter of nonfuel minerals in
Africa and the world's fifth-largest producer of uranium. Alluvial
diamond deposits are among the richest in the world, making Namibia a
primary source for gem-quality diamonds. Namibia also produces large
quantities of lead, zinc, tin, silver, and tungsten, and it has
substantial resources of coal. More than half the population depends
on agriculture (largely subsistence agriculture) for its livelihood.

_Economy

_Overview: Revenues come from the export of phosphates, the reserves of which are expected to be exhausted by the year 2000. Phosphates have
given Nauruans one of the highest per capita incomes in the Third World--$10,000 annually. Few other resources exist so
most necessities must be imported, including fresh water from
Australia. The rehabilitation of mined land and the replacement of income
from phosphates constitute serious long-term problems. Substantial
investment in trust funds, out of phosphate income, will help cushion the
transition.

Economy

Overview: Nepal is among the poorest and least developed countries in the world with a per capita income of less than $200. Real growth averaged 4% in the 1980s until FY89, when it plunged to 1.5% because of a trade/transit dispute with India. Though the impasse is over, political turmoil and inflated energy costs will probably constrain growth to under 4%. Agriculture is the mainstay of the economy, providing a livelihood for over 90% of the population and accounting for 60% of GDP. Industrial activity is limited, mainly involving the processing of agricultural produce (jute, sugarcane,
tobacco, and grain). Production of textiles and carpets has expanded recently and accounted for 87% of foreign exchange earnings in FY89.

Apart from agricultural land and forests, the only other exploitable natural resources are mica, hydropower, and tourism. Agricultural production in the late 1980s grew by about 5%, compared with a population growth of 2.6%. Forty percent or more of the population is undernourished partly because of poor distribution. Economic prospects for the 1990s are poor, with economic growth probably outpacing population growth only slightly.

Economy

Overview: This highly developed and affluent economy is based on private enterprise. The government makes its presence felt, however, through many regulations, permit requirements, and welfare programs affecting most aspects of economic activity. The trade and financial services sector contributes over 50% of GDP. Industrial activity provides about 25% of GDP and is led by the food-processing, oil-refining, and metalworking industries. The highly mechanized agricultural sector employs only 5% of the labor force, but provides large surpluses for export and the domestic food-processing industry. An unemployment rate of 6.8% and a sizable budget deficit are currently the most serious economic problems.
GDP: $218.0 billion, per capita $14,600; real growth rate 3.1% (1990)

Inflation rate (consumer prices): 2.2% (1990 est.)

Economy

Overview: Since 1984 the government has been reorienting an agrarian economy dependent on a guaranteed British market to an open free market economy that can compete on the global scene. The government has hoped that dynamic growth would boost real incomes, reduce inflationary pressures, and permit the expansion of welfare benefits. The results have been mixed: inflation is down from double-digit levels but growth has been sluggish and unemployment, always a highly sensitive issue, has been at a record high 7.4%. In 1988 GDP fell by 1%, in 1989 grew by a moderate 2.4%, and was flat in 1990.
GDP: $40.2 billion, per capita $12,200; real growth rate 0.7%
(1990)

Inflation rate (consumer prices): 6.5% (FY90)

Economy
Overview: Government control of the economy historically has been
extensive, although the Chamorro government has pledged to reduce it.
The financial system is directly controlled by the state, which also
regulates wholesale purchasing, production, sales, foreign trade, and
distribution of most goods. Over 50% of the agricultural and industrial
firms are state owned. Sandinista economic policies and the war
have produced a severe economic crisis. The foundation of the economy
continues to be the export of agricultural commodities, largely coffee
and cotton. Farm production fell by roughly 7% in 1989, the fifth
successive year of decline. The agricultural sector employs 44%
of the work force and accounts for 23% of GDP and 86% of export earnings.

Industry, which employs 13% of the work force and contributes about
25% to GDP, showed a drop of 7% in 1989 and remains below
pre-1979 levels. External debt is one of the highest in the world on a
per capita basis. In 1990 the annual inflation rate was 11,800%, sharply
up from 1,800% in 1989.

__GDP: $1.7 billion, per capita $470; real growth rate - 1.0% (1990 est.)

Economy

Overview: About 90% of the population is engaged in farming and stock rearing, activities which generate almost half the national income. The economy also depends heavily on exploitation of large uranium deposits. Uranium production grew rapidly in the mid-1970s, but tapered off in the early 1980s, when world prices declined. France is a major customer, while Germany, Japan, and Spain also make regular purchases. The depressed demand for uranium has contributed to an overall sluggishness in the economy, a severe trade imbalance, and a mounting external debt.

_**Economy**

_#_Overview: Although Nigeria is Africa's leading oil-producing country, it remains poor with a $280 per capita GDP. In 1990, despite rising oil prices and a sharp drop in inflation, performance remained slack with continuing underutilization of industrial capacity and a second year of relatively weak agricultural performance. Agricultural production was up only 4.2% in 1990, still below the 1987 level. Industrial output showed a 7.2% increase, but remained below the 1985 level. Government efforts to reduce Nigeria's dependence on oil exports and to sustain noninflationary growth have fallen short due to inadequate new investment funds. Living standards continue to deteriorate from the higher level of the early 1980s oil boom.

Economy

Overview: The economy is heavily dependent on aid from New Zealand. Government expenditures regularly exceed revenues, with the shortfall made up by grants from New Zealand--the grants are used to pay wages to public employees. The agricultural sector consists mainly of subsistence gardening, although some cash crops are grown for export. Industry consists primarily of small factories to process passion fruit, lime oil, honey, and coconut cream. The sale of postage stamps to foreign collectors is an important source of revenue. The island in recent years has suffered a serious loss of population because of migration of Niueans to New Zealand.

Economy

Overview: The economy benefits substantially from financial assistance from the US. An agreement for the years 1986 to 1992 entitles the islands to $228 million for capital development, government operations, and special programs. Another major source of income is the tourist industry, which employs about 10% of the work force. The agricultural sector is made up of cattle ranches and small farms producing coconuts, breadfruit, tomatoes, and melons. Industry is small scale in nature--mostly handicrafts and fish processing.

Economy
Overview: Norway is a prosperous capitalist nation with the resources to finance extensive welfare measures. Since 1975 exploitation of large crude oil and natural gas reserves has helped maintain high growth; for the past five years growth has averaged 4.1%, the fourth-highest among OECD countries. Growth slackened in 1987-88 partially because of the sharp drop in world oil prices, but picked up again in 1989. The Brundtland government plans to push hard on environmental issues, as well as cutting unemployment, improving child care, upgrading major industries, and negotiating an EC - European Free Trade Association (EFTA) agreement on an Economic European Area.

Economy

Overview: Economic performance is closely tied to the fortunes of
the oil industry. Petroleum accounts for nearly all export earnings,
about 80% of government revenues, and roughly 40% of GDP. Oman has
proved oil reserves of 4 billion barrels, equivalent to about 20 years'
supply at the current rate of extraction. Although agriculture employs a
majority of the population, urban centers depend on imported food.

# Comparative area: slightly less than 18 times the size of the US; the largest ocean (followed by the Atlantic Ocean, Indian Ocean, and Arctic Ocean); covers about one-third of the global surface; larger than the total land area of the world
# Coastline: 135,663 km

# Climate: the western Pacific is monsoonal--a rainy season occurs during the summer months, when moisture-laden winds blow from the ocean over the land, and a dry season during the winter months, when dry winds blow from the Asian land mass back to the ocean

# Terrain: surface in the northern Pacific dominated by a clockwise, warm water gyre (broad, circular system of currents) and in the southern Pacific by a counterclockwise, cool water gyre; sea ice occurs in the Bering Sea and Sea of Okhotsk during winter and reaches maximum northern extent from Antarctica in October; the ocean floor in the eastern Pacific is dominated by the East Pacific Rise, while the western Pacific is dissected by deep trenches; the world's greatest depth is 10,924 meters in the Marianas Trench

# Natural resources: oil and gas fields, polymetallic nodules, sand and gravel aggregates, placer deposits, fish

# Environment: endangered marine species include the dugong, sea lion, sea otter, seals, turtles, and whales; oil pollution in Philippine Sea and South China Sea; dotted with low coral islands and rugged volcanic islands in the southwestern Pacific Ocean; subject to tropical cyclones (typhoons) in southeast and east Asia from May to December (most frequent from July to October); tropical cyclones (hurricanes) may form
south of Mexico and strike Central America and Mexico from June to October (most common in August and September); southern shipping lanes subject to icebergs from Antarctica; occasional El Nino phenomenon occurs off the coast of Peru when the trade winds slacken and the warm Equatorial Countercurrent moves south, which kills the plankton that is the primary food source for anchovies; consequently, the anchovies move to better feeding grounds, causing resident marine birds to starve by the thousands because of their lost food source

_#_Note: the major choke points are the Bering Strait, Panama Canal, Luzon Strait, and the Singapore Strait; the Equator divides the Pacific Ocean into the North Pacific Ocean and the South Pacific Ocean; ships subject to superstructure icing in extreme north from October to May and in extreme south from May to October; persistent fog in the northern Pacific from June to December is a hazard to shipping; surrounded by a zone of violent volcanic and earthquake activity sometimes referred to as the Pacific Ring of Fire

_*_Economy

_#_Overview: The Pacific Ocean is a major contributor to the world economy and particularly to those nations its waters directly touch. It provides cheap sea transportation between East and West, extensive fishing grounds, offshore oil and gas fields, minerals, and sand and gravel for the construction industry. In 1985 over half (54%) of the world's total fish catch came from the Pacific Ocean, which is the only ocean where the fish catch has increased every year since 1978. Exploitation of offshore oil and gas reserves is playing an
ever-increasing role in the energy supplies of Australia, New Zealand, China, US, and Peru. The high cost of recovering offshore oil and gas, combined with the wide swings in world prices for oil since 1985, has slowed but not stopped new drillings.

Economy

Overview: Pakistan is a poor Third World country faced with the usual problems of rapidly increasing population, sizable government deficits, and heavy dependence on foreign aid. In addition, the economy must support a large military establishment and provide for the needs of 4 million Afghan refugees. A real economic growth rate averaging 5-6% in recent years has enabled the country to cope with these problems. Almost all agriculture and small-scale industry is in private hands, and the government seeks to privatize a portion of the large-scale industrial enterprises now publicly owned. In December 1988, Pakistan signed a three-year economic reform agreement with the IMF, which provides for a reduction in the government deficit and a liberalization of trade in return for further IMF financial support. Late in 1990, the IMF suspended assistance to Pakistan because the government failed to follow through on deficit reforms. Pakistan almost certainly will make little headway on raising living standards for its rapidly expanding population; at the current rate of growth, population would double in
29 years.

Economy

Overview: GDP expanded by an estimated 5% in 1990, after contracting 1% in 1988 and 14% in 1989. Political stability prompted greater business confidence and consumer demand, leading to increased production by the agricultural, commercial, manufacturing, construction, and utilities sectors. The transportation sector and government services declined slightly due to slack early-1990 transits through the Panama Canal, lower oil pipeline flowthrough, and Panama City's budget cuts. Imports and exports posted gains during the year, and government revenues were up sharply over 1989's levels.

GDP: $4.8 billion, per capita $1,980; real growth rate 5% (1990 est.)

Inflation rate (consumer prices): 1.3% (1990 est.)

Unemployment rate: 20% (1990)

Budget: revenues $1.7 billion; expenditures $1.8 billion, including capital expenditures of $70 million (1990 est.)

Exports: $355 million (f.o.b., 1990 est.)
commodities--bananas 27%, shrimp 21%, clothing 6%, coffee 4%, sugar 4%;

partners--US 90%, Central America and Caribbean, EC (1989 est.)

Imports: $1,250 million (f.o.b., 1990);

commodities--foodstuffs 13%, capital goods 12%, crude oil 12%, consumer goods, chemicals;

partners--US 35%, Central America and Caribbean, EC, Mexico, Venezuela (1989 est.)

External debt: $5 billion (December 1990 est.)

Industrial production: growth rate 4.8% (1990 est.)

Electricity: 1,113,000 kW capacity; 3,264 million kWh produced, 1,350 kWh per capita (1990)

* Economy

Overview: Papua New Guinea is richly endowed with natural
resources, but exploitation has been hampered by the rugged terrain and
the high cost of developing an infrastructure. Agriculture provides a
subsistence livelihood for 85% of the population. Mining of numerous
deposits, including copper and gold, accounts for about 60% of
export earnings. Budgetary support from Australia and development aid
under World Bank auspices help sustain the economy.

GDP: $2.7 billion, per capita $725; real growth rate - 3.0% (1989 est.)

Inflation rate (consumer prices): 4.5% (1989)

Unemployment rate: 5% (1988)

Budget: revenues $867 million; expenditures $873 million,
including capital expenditures of $119 million (1990 est.)

Exports: $1.4 billion (f.o.b., 1989);
commodities--gold, copper ore, coffee, cocoa, copra, palm oil, timber, lobster;

partners--FRG, Japan, Australia, UK, Spain, US

Imports: $1.5 billion (c.i.f., 1989);

commodities--machinery and transport equipment, fuels, food, chemicals, consumer goods;

partners--Australia, Singapore, Japan, US, New Zealand, UK

External debt: $2.76 billion (December 1990)

Industrial production: growth rate NA%; accounts for 25% of GDP

Electricity: 397,000 kW capacity; 1,510 million kWh produced, 400 kWh per capita (1990)

Industries: copra crushing, oil palm processing, plywood processing, wood chip production, gold, silver, copper, construction, tourism
__Agriculture: one-third of GDP; livelihood for 85% of population;  
  fertile soils and favorable climate permits cultivating a wide variety of  
  crops; cash crops—coffee, cocoa, coconuts, palm kernels; other  
  products—tea, rubber, sweet potatoes, fruit, vegetables, poultry, pork;  
  net importer of food for urban centers

__Economic aid: US commitments, including Ex-Im (FY70-89), $40.6  
  million; Western (non-US) countries, ODA and OOF bilateral commitments  
  (1970-88), $6.4 billion; OPEC bilateral aid (1979-89), $17 million

Economy

Overview: The economy is predominantly agricultural. Agriculture,
including forestry, accounts for about 25% of GNP, employs about 45% of the labor force, and provides the bulk of exports. Paraguay has no known significant mineral or petroleum resources but does have a large hydropower potential. Since 1981 economic performance has declined compared with the boom period of 1976-81, when real GDP grew at an average annual rate of nearly 11%. During 1982-86 real GDP fell in three of five years, inflation jumped to an annual rate of 32%, and foreign debt rose. Factors responsible for the erratic behavior of the economy were the completion of the Itaipu hydroelectric dam, bad weather for crops, and weak international commodity prices for agricultural exports. In 1987 the economy experienced a minor recovery because of improved weather conditions and stronger international prices for key agricultural exports. The recovery continued through 1990, on the strength of bumper crops in 1988-89. The government, however, must follow through on promises of reforms needed to deal with escalating inflation, large fiscal deficits, growing debt arrearages, and falling reserves.

_economy

Overview: The Peruvian economy is basically capitalistic, with a large dose of government welfare programs and government management of credit. In the 1980s the economy suffered from hyperinflation, declining per capita output, and mounting external debt. Peru was shut off from IMF and World Bank support in the mid-1980s because of its huge debt arrears. An austerity program implemented shortly after the Fujimori government took office in July 1990 contributed to a third consecutive yearly contraction of economic activity, but was able to generate a small recovery in the last quarter. After a burst of inflation as the program eliminated government price subsidies, monthly price increases eased to the single-digit level for the first time since mid-1988. Lima has restarted current payments to multilateral lenders and, although it faces $14 billion in arrears on its external debt, is working toward an accommodation with its creditors.

Economy

Overview: The economy continues to recover from the political turmoil following the ouster of former President Marcos and several coup
attempts. After two consecutive years of economic contraction (1984 and 1985), the economy has since 1986 had positive growth, although in 1990 the economy slowed considerably from 1989. The agricultural sector together with forestry and fishing, plays an important role in the economy, employing about 45% of the work force and providing almost 30% of GDP. The Philippines is the world's largest exporter of coconuts and coconut products. Manufacturing contributes about 25% of GDP. Major industries include food processing, chemicals, and textiles.

_Economy

_Overview: The economy, except for the agricultural sector, had
followed the Soviet model of state ownership and control of
productive assets. About 75% of agricultural production had come from the
private sector and the rest from state farms. The economy has presented a
picture of moderate but slowing growth against a background of underlying
weaknesses in technology and worker motivation. GNP dropped by 2.0% in 1989 and by a further 8.9% in 1990. The inflation rate, after falling sharply from the 1982 peak of 100% to 22% in 1986, rose to a galloping rate of 640% in 1989 and dropped back to 250% in 1990. Shortages of consumer goods and some food items worsened in 1988-89. Agricultural products and coal are among the biggest hard currency earners, but manufactures are increasing in importance. Poland, with its hard currency debt of $48.5 billion, is severely limited in its ability to import much-needed hard currency goods. The sweeping political changes of 1989 disrupted normal economic channels and exacerbated shortages. In January 1990, the new Solidarity-led government adopted a cold turkey program for transforming Poland to a market economy. The government moved to eliminate subsidies, free prices, make the zloty convertible, and, in general, halt the hyperinflation. These financial measures were accompanied by plans to privatize the economy in stages. While inflation fell to an annual rate of 77.5% by November of 1990, the rise in unemployment and the drop in living standards have led to growing popular discontent and to a change of government in January 1991. The new government is continuing the previous government's economic program, while trying to speed privatization and to better cushion the populace from the dislocations associated with reform. Substantial outside aid will be needed if Poland is to make a successful transition in the 1990s.

_Economy

_Overview: During the past four years, the economy has made a
sustained recovery from the severe recession of 1983-85. The economy
grew by 14% during the 1987-89 period, largely because of strong
domestic consumption and investment spending. Unemployment has
declined for the third consecutive year, but inflation continues to be
about three times the European Community average. The government is
pushing economic restructuring and privatization measures in anticipation
of the 1992 European Community timetable to form a single large market in
Europe.

_Economy

Overview: Puerto Rico has one of the most dynamic economies in the
Caribbean region. Industry has surpassed agriculture as the primary
sector of economic activity and income. Encouraged by duty-free
access to the US and by tax incentives, US firms have invested heavily
in Puerto Rico since the 1950s. Important new industries include
pharmaceuticals, electronics, textiles, petrochemicals, and processed
foods. Sugar production has lost out to dairy production and other
livestock products as the main source of income in the agricultural
sector. Tourism has traditionally been an important source of income
for the island. The economy is slowly recovering from the disruptions
cauased by Hurricane Hugo in September 1989. The tourism infrastructure
was especially hard hit.

_Communists: Communist party small but has support among sugarcane cutters, the minuscule Popular Movement for the Liberation of Reunion (MPLR), and in the district of Le Port

_Member of: FZ, WFTU

_Diplomatic representation: as an overseas department of France, Reunionese interests are represented in the US by France

_Flag: the flag of France is used

_Economy
_Overview: The economy has traditionally been based on agriculture. Sugarcane has been the primary crop for more than a century, and in some years it accounts for 85% of exports. The government has been pushing the development of a tourist industry to relieve high unemployment, which recently amounted to one-third of the labor force. The white and Indian communities are substantially better off than other segments
of the population, adding to the social tensions generated by poverty and unemployment. The economic well-being of Reunion depends heavily on continued financial assistance from France.

_GDP: $3.37 billion, per capita $6,000 (1987 est.); real growth rate 9% (1987 est.)

Economy

Overview: Industry, which accounts for one-third of the labor force and generates over half the GNP, suffers from an aging capital plant and persistent shortages of energy. The year 1990 witnessed about a 20% drop in industrial production because of energy and input shortages and labor unrest. In recent years the agricultural sector has had to contend with drought, mismanagement, and shortages of inputs. A drought in 1990 contributed to a lackluster harvest, a problem compounded by corruption and a poor distribution system. The new government is slowly loosening the tight central controls of Ceausescu's command economy. It has instituted moderate land reforms, with close to one-half of cropland now in private hands, and it has allowed changes in prices for private agricultural output. Also, the new regime is permitting the
establishment of private enterprises, largely in services, handicrafts, 
and small-scale industry. New laws providing for the privatization 
of large state firms have been passed. However, most of the early 
privatization will involve converting state firms into joint-stock 
companies. The selling of shares to the public has not yet been worked 
out. Furthermore, the government has halted the old policy of diverting 
food from domestic consumption to hard currency export markets. So far, 
the government does not seem willing to adopt a thoroughgoing market 
system, that is, there is great caution in decontrolling prices because 
of public opposition. The government has sharply raised price ceilings 
instead of lifting them entirely.

Economy

Overview: Almost 50% of GDP comes from the agricultural sector; coffee and tea make up 80-90% of total exports. The amount of fertile land is limited, however, and deforestation and soil erosion have created problems. The industrial sector in Rwanda is small, contributing only 16% to GDP. Manufacturing focuses mainly on the processing of agricultural products. The Rwandan economy remains dependent on coffee exports and foreign aid, with no relief in sight. Weak international prices since 1986 have caused the economy to contract and per capita GDP to decline. A structural adjustment program with the World Bank began in October 1990. An outbreak of insurgency, also in October, has dampened any prospects for economic improvement.

GDP: $2.2 billion, per capita $300; real growth rate - 2.2% (1989 est.)

**Economy**

**Overview:** Since 1983 the economy has shown an impressive average annual growth rate of almost 5% because of strong agricultural and tourist sectors. Saint Lucia also possesses an expanding industrial base supported by foreign investment in manufacturing and other activities, such as in data processing. The economy, however, remains vulnerable because the important agricultural sector is dominated by banana production. Saint Lucia is subject to periodic droughts and/or tropical storms, and its protected market agreement with the UK for bananas may end in 1992.

Economy
Overview: The inhabitants have traditionally earned their
livelihood by fishing and by servicing fishing fleets operating off the
coast of Newfoundland. The economy has been declining, however, because
the number of ships stopping at Saint Pierre has dropped steadily over
the years. In March 1989, an agreement between France and Canada set fish
quotas for Saint Pierre's trawlers fishing in Canadian and
Canadian-claimed waters for three years. The agreement settles a
longstanding dispute that had virtually brought fish exports to a halt.
The islands are heavily subsidized by France. Imports come primarily from
Canada and France.

Economy

Overview: Agriculture, dominated by banana production, is the most important sector of the economy. The services sector, based mostly on a growing tourist industry, is also important. The economy continues to have a high unemployment rate of 30% because of an overdependence on the weather-plagued banana crop as a major export earner. Government progress toward diversifying into new industries has been relatively unsuccessful.

GDP: $146 million, per capita $1,315; real growth rate 5.9% (1989 est.)

Inflation rate (consumer prices): 2.6% (1989)

Unemployment rate: 30% (1989 est.)
Budget: revenues $62 million; expenditures $67 million, including capital expenditures of $21 million (FY90 est.)

Exports: $74.6 million (f.o.b., 1989);
commodities--bananas 45%, eddoes and dasheen (taro), sweet potatoes, spices, light manufactures;
partners--UK 43%, CARICOM 37%, US 15%

Imports: $127.5 million (c.i.f., 1989);
commodities--foodstuffs, machinery and equipment, chemicals and fertilizers, minerals and fuels;
partners--US 42%, CARICOM 19%, UK 15%

External debt: $42.2 million (FY89)

_Economy

_Overview: The economy has remained dependent on cocoa since the country gained independence nearly 15 years ago. Since then, however, cocoa production has gradually deteriorated because of drought and mismanagement, so that by 1987 output had fallen to less than 50% of
its former levels. As a result, a shortage of cocoa for export has created a serious balance-of-payments problem. Production of less important crops, such as coffee, copra, and palm kernels, has also declined. The value of imports generally exceeds that of exports by a ratio of 4 to 1. The emphasis on cocoa production at the expense of other food crops has meant that Sao Tome has to import 90% of food needs. It also has to import all fuels and most manufactured goods. Over the years, Sao Tome has been unable to service its external debt, which amounts to roughly 80% of export earnings. Considerable potential exists for development of a tourist industry, and the government has taken steps to expand facilities in recent years. The government also implemented a Five-Year Plan covering 1986-90 to restructure the economy and reschedule external debt service payments in cooperation with the International Development Association and Western lenders.

* Economy
# Overview: The economic and social infrastructure is not well developed. Subsistence agriculture dominates the economy, generating about one-third of GDP and employing about two-thirds of the working population. Manufacturing accounts for less than 10% of GDP, consisting mainly of the processing of raw materials and of light manufacturing for the domestic market. Diamond mining provides an important source of hard currency. The economy suffers from high unemployment, rising inflation, large trade deficits, and a growing dependency on foreign assistance.
The government in 1990 was attempting to get the budget deficit under control and, in general, to bring economic policy in line with the recommendations of the IMF and the World Bank.

Economy

Overview: Singapore has an open entrepreneurial economy with strong service and manufacturing sectors and excellent international trading links derived from its entrepot history. During the 1970s and early
1980s, the economy expanded rapidly, achieving an average annual growth rate of 9%. Per capita GDP is among the highest in Asia. In 1985 the economy registered its first drop in 20 years and achieved less than a 2% increase in 1986. Recovery was strong based on rising demand for Singapore's products in OECD countries and improved competitiveness of domestic manufactures. The economy grew 8.3% in 1990. Singapore's position as a major oil refining and services center helped it weather the Persian Gulf crisis.

*Economy
Overview: One of the world's poorest and least developed countries, Somalia has few resources. Agriculture is the most important sector of the economy, with the livestock sector accounting for about 40% of GDP and about 65% of export earnings. Nomads and seminomads who are dependent upon livestock for their livelihoods make up more than half of the population. Crop production generates only 10% of GDP and employs about 20% of the work force. The main export crop is bananas; sugar, sorghum, and corn are grown for the domestic market. The small industrial sector is based on the processing of agricultural products and accounts for less than 10% of GDP. Serious economic problems facing the nation are the external debt of $1.9 billion and double-digit inflation.

Flag: actually four flags in one--three miniature flags reproduced
in the center of the white band of the former flag of the Netherlands
which has three equal horizontal bands of orange (top), white, and blue;
the miniature flags are a vertically hanging flag of the old Orange Free
State with a horizontal flag of the UK adjoining on the hoist side and a
horizontal flag of the old Transvaal Republic adjoining on the other side
Economy

Overview: Many of the white one-seventh of the South African population enjoy incomes, material comforts, and health and educational standards equal to those of Western Europe. In contrast, most of the remaining population suffers from the poverty patterns of the Third World, including unemployment, lack of job skills, and barriers to movement into higher-paying fields. Inputs and outputs thus do not move smoothly into the most productive employments, and the effectiveness of the market is further lowered by international constraints on dealings with South Africa. The main strength of the economy lies in its rich mineral resources, which provide two-thirds of exports. Average growth of less than 2% in output in recent years falls far short of the 5-6% level needed to cut into the high unemployment rate.

GDP: $101.7 billion, per capita $2,600; real growth rate - 0.9% (1990)

Inflation rate (consumer prices): 14.4% (1990)

Unemployment rate: 22% (1989); blacks 25-30%, up to 50% in homelands (1988 est.)

Budget: revenues $28.9 billion; expenditures $32.8 billion, including capital expenditures of $1.1 billion (FY92 est.)
Exports: $23.4 billion (f.o.b., 1990);
commodities--gold 39%, minerals and metals 33%, food 5%,
chemicals 3%;
partners--Italy, Japan, US, FRG, UK, other EC, Hong Kong

Imports: $17 billion (c.i.f., 1990);
commodities--machinery 32%, transport equipment 15%, chemicals 11%,
oil, textiles, scientific instruments, base metals;
partners--FRG, Japan, UK, US, Italy

External debt: $19.5 billion (July 1990)

Industrial production: growth rate NA%; accounts for about
45% of GDP

Electricity: 34,941,000 kW capacity; 158,000 million kWh produced,
4,100 kWh per capita (1989)

Industries: mining (world's largest producer of platinum, gold,
chromium), automobile assembly, metalworking, machinery, textile, iron and steel, chemical, fertilizer, foodstuffs

_Agriculture: accounts for about 5% of GDP and 30% of labor force; diversified agriculture, with emphasis on livestock; products--cattle, poultry, sheep, wool, milk, beef, corn, wheat; sugarcane, fruits, vegetables; self-sufficient in food

_Economic aid: NA

_Currency: rand (plural--rand); 1 rand (R) = 100 cents

_Fiscal year: 1 April-31 March

_Communications

_Railroads: 20,638 km route distance total; 35,079 km of 1.067-meter gauge trackage (counts double and multiple tracking as single track); 314 km of 610 mm gauge

_Highways: 188,309 km total; 54,013 km paved, 134,296 km crushed
stone, gravel, or improved earth

_Pipelines: 931 km crude oil; 1,748 km refined products; 322 km natural gas

_Ports: Durban, Cape Town, Port Elizabeth, Richard's Bay, Saldanha, Mosselbaai, Walvis Bay

_Merchant marine: 7 ships (1,000 GRT or over) totaling 229,245 GRT/218,929 DWT; includes 6 container, 1 vehicle carrier

_Civil air: 81 major transport aircraft

_Airports: 917 total, 765 usable; 130 with permanent-surface runways; 5 with runways over 3,659 m; 10 with runways 2,440-3,659 m; 224 with runways 1,220-2,439 m

_Telecommunications: the system is the best developed, most modern, and has the highest capacity in Africa; it consists of carrier-equipped open-wire lines, coaxial cables, radio relay links, fiber optic cable, and radiocommunication stations; key centers are Bloemfontein, Cape Town, Durban, Johannesburg, Port Elizabeth, and Pretoria; 4,500,000 telephones; stations--14 AM, 286 FM, 67 TV; 1 submarine cable; earth stations--1 Indian Ocean INTELSAT and 2 Atlantic Ocean INTELSAT
Defense Forces
Branches: Army, Navy, Air Force, Medical Services

Manpower availability: males 15-49, 9,797,349; 5,980,786 fit for military service; 426,615 reach military age (18) annually; obligation for service in Citizen Force or Commandos begins at 18; volunteers for service in permanent force must be 17; national service obligation is one year; figures include the so-called homelands not recognized by the US

Defense expenditures: $3.67 billion, 11% of GDP (FY92)

South Georgia and the South Sandwich Islands
(dependent territory of the UK)

Geography
Total area: 4,066 km2; land area: 4,066 km2; includes Shag and Clerke Rocks

Comparative area: slightly larger than Rhode Island

Land boundaries: none

Coastline: undetermined
Maritime claims:

Territorial sea: 12 nm

Disputes: administered by the UK, claimed by Argentina

Climate: variable, with mostly westerly winds throughout the year, interspersed with periods of calm; nearly all precipitation falls as snow

Terrain: most of the islands, rising steeply from the sea, are rugged and mountainous; South Georgia is largely barren and has steep, glacier-covered mountains; the South Sandwich Islands are of volcanic origin with some active volcanoes

Natural resources: fish

Land use: arable land 0%; permanent crops 0%; meadows and pastures 0%; forest and woodland 0%; other 100%; largely covered by permanent ice and snow with some sparse vegetation consisting of grass, moss, and lichen

Environment: reindeer, introduced early in this century, live on South Georgia; weather conditions generally make it difficult to
approach the South Sandwich Islands; the South Sandwich Islands are subject to active volcanism

# Note: the north coast of South Georgia has several large bays, which provide good anchorage

* People

# Population: no permanent population; there is a small military garrison on South Georgia and the British Antarctic Survey has a biological station on Bird Island; the South Sandwich islands are uninhabited

* Government

# Long-form name: South Georgia and the South Sandwich Islands (no short-form name)

# Type: dependent territory of the UK

# Capital: Grytviken on South Georgia is the garrison town

# Administrative divisions: none (dependent territory of the UK)

# Independence: none (dependent territory of the UK)
Constitution: 3 October 1985

Legal system: English common law

Executive branch: British monarch, commissioner

Legislative branch: none

Judicial branch: none

Leaders:

Chief of State--Queen ELIZABETH II (since 6 February 1952), represented by Commissioner William Hugh FULLERTON (since 1988; resident at Stanley, Falkland Islands)

Economy

Overview: Some fishing takes place in adjacent waters. There is a potential source of income from harvesting fin fish and krill. The islands receive income from postage stamps produced in the UK.
Budget: revenues $291,777; expenditures $451,011, including capital expenditures of $NA (FY88 est.)

Electricity: 900 kW capacity; 2 million kWh produced, NA kWh per capita (1990)

Communications
Highways: NA

Ports: Grytviken on South Georgia

Airports: 5 total, 5 usable; 2 with permanent-surface runways; 1 with runway 2,440-3,659 m

Telecommunications: coastal radio station at Grytviken; no broadcast stations

Defense Forces
Note: defense is the responsibility of the UK

Geography
Total area: 22,402,200 km²; land area: 22,272,000 km²
Comparative area: slightly less than 2.5 times the size of US

Land boundaries: 19,933 km total; Afghanistan 2,384 km, Czechoslovakia 98 km, China 7,520 km, Finland 1,313 km, Hungary 135 km, Iran 1,690 km, North Korea 17 km, Mongolia 3,441 km, Norway 196 km, Poland 1,215 km, Romania 1,307 km, Turkey 617 km

Coastline: 42,777 km

Maritime claims:

Continental shelf: 200 m (depth) or to depth of exploitation;

Exclusive economic zone: 200 nm;

Territorial sea: 12 nm

Disputes: bilateral negotiations are under way to resolve disputed sections of the boundary with China; US Government has not recognized the incorporation of Estonia, Latvia, and Lithuania into the Soviet Union; Etorofu, Kunashiri, and Shikotan Islands and the Habomai island group occupied by Soviet Union since 1945, claimed by Japan; maritime dispute with Norway over portion of Barents Sea; has made no territorial claim in Antarctica (but has reserved the right to do so)
and does not recognize the claims of any other nation; Kurdish question among Iran, Iraq, Syria, Turkey, and the USSR

__#_Climate: mostly temperate to arctic continental; winters vary from cool along Black Sea to frigid in Siberia; summers vary from hot in southern deserts to cool along Arctic coast

__#_Terrain: broad plain with low hills west of Urals; vast coniferous forest and tundra in Siberia, deserts in Central Asia, mountains in south

__#_Natural resources: self-sufficient in oil, natural gas, coal, and strategic minerals (except bauxite, alumina, tantalum, tin, tungsten, fluorspar, and molybdenum), timber, gold, manganese, lead, zinc, nickel, mercury, potash, phosphates; note--the USSR is the world's largest producer of oil and natural gas, third in coal

__#_Land use: arable land 10%; permanent crops NEGL%; meadows and pastures 17%; forest and woodland 41%; other 32%; includes irrigated 1%

__#_Environment: despite size and diversity, small percentage of land is arable and much is too far north; some of most fertile land is water deficient or has insufficient growing season; many better climates have poor soils; hot, dry, desiccating sukhovey wind affects south; desertification; continuous permafrost over much of Siberia is a major impediment to development
Note: largest country in world, but unfavorably located in relation to major sea lanes of world

Economy
Overview: The first six years of perestroyka (economic and political restructuring) have undermined the institutions and processes of the Soviet command economy without replacing them with efficiently functioning markets. The initial reforms have featured greater authority for enterprise managers over prices, wages, product mix, investment,
sources of supply, and customers. But in the absence of effective market
discipline, the result has been the disappearance of low-price goods,
excessive wage increases, an even larger volume of unfinished
construction projects, and, in general, continued economic stagnation.

The Gorbachev regime has made at least four serious errors in economic
policy in these six years: the unpopular and short-lived antialcohol
campaign; the initial cutback in imports of consumer goods; the failure
to act decisively at the beginning for the privatization of agriculture;
and the buildup of a massive overhang of unspent rubles in the hands of
households and enterprises. The regime has vacillated among a series of
ambitious economic policy prescriptions put forth by leading economists
and political leaders. The plans vary from proposals for (a) quick
marketization of the economy; (b) gradual marketization; (c) a period
of retrenchment to ensure a stable base for future marketization; and
(d) a return to disciplined central planning and allocation. The
economy, caught between two systems, is suffering from even greater
mismatches between what is being produced and what would serve the best
interests of enterprises and households. Meanwhile, the seething
nationality problems have been dislocating regional patterns of economic
specialization and pose a further major threat to growth prospects over
the next few years. Official Soviet statistics report GNP fell by 2% in
1990, but the actual decline was substantially greater. Whatever the
numerical decline, it does not capture the increasing disjointures in the
economy evidenced by emptier shelves, longer lines, increased barter, and
widespread strikes.

_GNP: approximately $2,660 billion, per capita $9,130;_
real growth rate - 2.4% to - 5.0% (1990 est. based on a reconstruction
of official Soviet statistics); note--because of the continued
unraveling of Soviet economic and statistical controls, the estimate
is subject to even greater uncertainties than in earlier years; the
dollar estimates most likely overstate Soviet GNP to some extent because
of an incomplete allowance for the poor quality, narrow assortment, and
low performance characteristics of Soviet goods and services; the
- 2.4% growth figure is based on the application of CIA's usual
estimating methods whereas the - 5.0% figure is corrected for
measurement problems that worsened sharply in 1990

_Inflation rate (consumer prices): 14% (1990 est.)

_Unemployment rate: official Soviet statistics imply an unemployment
rate of 1 to 2 percent in 1990; USSR's first official unemployment
estimate, however, is acknowledged to be rough

_Budget: revenues 422 billion rubles; expenditures 510 billion
rubles, including capital expenditures of 53 billion rubles (1990 est.)

_Exports: $109.3 billion (f.o.b., 1989);

commodities--petroleum and petroleum products, natural gas, metals,
wood, agricultural products, and a wide variety of manufactured goods
(primarily capital goods and arms);
partners--Eastern Europe 46%, EC 16%, Cuba 6%, US, Afghanistan (1989)

Imports: $114.7 billion (c.i.f., 1989);

commodities--grain and other agricultural products, machinery and equipment, steel products (including large-diameter pipe), consumer manufactures;

External debt: $55 billion (1990)

Industrial production: growth rate - 2.4% (1990 est.)

Electricity: 350,000,000 kW capacity; 1,740,000 million kWh produced, 5,920 kWh per capita (1990)

Industries: diversified, highly developed capital goods and defense industries; comparatively less developed consumer goods industries

Agriculture: accounts for roughly 20% of GNP and labor force;
production based on large collective and state farms; inefficiently
managed; wide range of temperate crops and livestock produced; world's
third-largest grain producer after the US and China; shortages of grain,
oilseeds, and meat; world's leading producer of sawnwood and roundwood;
annual fish catch among the world's largest

_Illicit drugs: illegal producer of cannabis and opium poppy,
mostly for domestic consumption; government has begun eradication
program to control cultivation; used as a transshipment country
for illicit drugs to Western Europe

_Economic aid: donor--extended to non-Communist less developed
countries (1954-89), $49.6 billion; extended to other Communist countries
(1954-89), $154 billion

_Currency: ruble (plural--rubles); 1 ruble (R) = 100 kopeks

_Exchange rates: rubles (R) per US$1--0.580 (1990),
0.629 (1989), 0.629 (1988), 0.633 (1987), 0.704 (1986), 0.838 (1985);
note--as of 1 April 1991 the official exchange rate remained
administratively set; it should not be used indiscriminately to convert
domestic rubles to dollars; in November 1990 the USSR introduced a
commercial exchange rate of 1.8 rubles to the dollar used for accounting
purposes within the USSR and which was still in force on 1 April 1991;
on 1 April 1991 the USSR introduced a new foreign-currency
market for foreign companies and individuals; the rate will be fixed
twice a week based on supply and demand; as of 4 April 1991 the rate
was 27.6 rubles to the dollar; Soviet citizens traveling abroad
are restricted to buying $200 a year at prevailing rates

_Fiscal year: calendar year

Communications
_Railroads: 147,400 km total; 53,900 km electrified; does not
include industrial lines (1989)

_Highways: 1,757,000 km total; 1,310,600 km hard-surfaced (asphalt,
concrete, stone block, asphalt treated, gravel, crushed stone);
446,400 km earth (1989)

_Inland waterways: 123,700 km navigable, exclusive of Caspian
Sea (1989)

_Pipelines: 82,000 km crude oil and refined products; 206,500 km
natural gas (1987)

_Communists: PCE membership declined from a possible high of 160,000 in 1977 to roughly 60,000 in 1987; the party gained almost 1 million voters and 10 deputies in the 1989 election; voters came
mostly from the disgruntled socialist left; remaining strength is in labor, where it dominates the Workers Commissions trade union (one of the country's two major labor centrals), which claims a membership of about 1 million; experienced a modest recovery in 1986 national election, nearly doubling the share of the vote it received in 1982

_#_Other political or pressure groups: on the extreme left, the Basque Fatherland and Liberty (ETA) and the First of October Antifascist Resistance Group (GRAPO) use terrorism to oppose the government; free labor unions (authorized in April 1977) include the Communist-dominated Workers Commissions (CCOO); the Socialist General Union of Workers (UGT), and the smaller independent Workers Syndical Union (USO); the Catholic Church; business and landowning interests; Opus Dei; university students

Economy

Overview: This Western capitalistic economy has done well since Spain joined the EC in 1986. With annual increases in real GNP averaging about 5% in the 1987-90 period, Spain has been the fastest growing member of the EC. Increased investment--both domestic and foreign--has been the most important factor pushing the economic expansion. Inflation moderated to 4.8% in 1988, but an overheated economy caused inflation to reach almost 7% in 1989-90. Another economic problem facing Spain is an unemployment rate of 16.3%, the highest in Europe.

GDP: $435.9 billion, per capita $11,100; real growth rate 3.7% (1990)

Inflation rate (consumer prices): 6.7% (1990)
Unemployment rate: 16.3% (1990)

Budget: revenues $100.1 billion; expenditures $111.6 billion, including capital expenditures of $NA (1990)

Exports: $55.6 billion (f.o.b., 1990);
commodities--foodstuffs, live animals, wood, footwear, machinery, chemicals;
partners--EC 67.8%, US 6.5%, other developed countries 9%

Imports: $87.7 billion (c.i.f., 1990);
commodities--petroleum, footwear, machinery, chemicals, grain, soybeans, coffee, tobacco, iron and steel, timber, cotton, transport equipment;
partners--EC 59.7%, US 8.5%, other developed countries 11.5%, Middle East 3.4%

External debt: $37 billion (1990 est.)
Industrial production: growth rate 3.5% (1990 est.)

Electricity: 46,589,000 kW capacity; 141,000 million kWh produced, 3,590 kWh per capita (1990)

Industries: textiles and apparel (including footwear), food and beverages, metals and metal manufactures, chemicals, shipbuilding, automobiles, machine tools

Agriculture: accounts for 5% of GNP and 14% of labor force; major products--grain, vegetables, olives, wine grapes, sugar beets, citrus fruit, beef, pork, poultry, dairy; largely self-sufficient in food; fish catch of 1.4 million metric tons is among top 20 nations

Economic aid: US commitments, including Ex-Im (FY70-87), $1.9 billion; Western (non-US) countries, ODA and OOF bilateral commitments (1970-79), $545.0 million; not currently a recipient

Currency: peseta (plural--pesetas); 1 peseta (Pta) = 100 centimos

Economy

Overview: Sudan, one of the world's poorest countries, is buffeted by civil war, chronic political instability, adverse weather, and counterproductive economic policies. The economy is dominated by governmental entities that account for more than 70% of new investment. The private sector's main areas of activity are agriculture and trading, with most private industrial investment predating 1980. The economy's base is agriculture, which employs 80% of the work force. Industry mainly processes agricultural items. Sluggish economic performance over the past decade, attributable largely to declining annual rainfall, has reduced levels of per capita income and consumption. A high foreign debt and huge arrearages continue to cause difficulties. In 1990 the International Monetary Fund took the unusual
step of declaring Sudan noncooperative on account of its nonpayment of arrearages to the Fund.

Economy
Overview: The economy is dominated by the bauxite industry, which accounts for about 70% of export earnings and 40% of tax revenues. The economy has been in trouble since the Dutch ended development aid in
1982. A drop in world bauxite prices that started in the late 1970s and continued until late 1986, was followed by the outbreak of a guerrilla insurgency in the interior. The guerrillas targeted the economic infrastructure, crippling the important bauxite sector and shutting down other export industries. These problems have created high inflation, high unemployment, widespread black market activity, and a bad climate for foreign investment. A small gain in economic growth of 2.0% was registered in 1989 due to reduced guerrilla activity and improved international markets for bauxite.

Economy

Overview: Coal mining is the major economic activity on Svalbard. By treaty (9 February 1920), the nationals of the treaty powers have equal rights to exploit mineral deposits, subject to Norwegian regulation. Although US, UK, Dutch, and Swedish coal companies have mined in the past, the only companies still mining are Norwegian and Soviet. Each company mines about half a million tons of coal annually. The settlements on Svalbard are essentially company towns. The Norwegian state-owned coal company employs nearly 60% of the Norwegian population on the island, runs many of the local services, and provides most of the local infrastructure. There is also some trapping of seal, polar bear, fox, and walrus.

Economy

Overview: The economy is based on subsistence agriculture, which occupies much of the labor force and contributes about 23% to GDP. Manufacturing, which includes a number of agroprocessing factories, accounts for another 26% of GDP. Mining has declined in importance in recent years; high-grade iron ore deposits were depleted in 1978, and health concerns cut world demand for asbestos. Exports of sugar and forestry products are the main earners of hard currency. Surrounded by South Africa, except for a short border with Mozambique, Swaziland is heavily dependent on South Africa, from which it receives 92% of its imports and to which it sends about 40% of its exports.

Economy

Overview: Aided by a long period of peace and neutrality during World War I through World War II, Sweden has achieved an enviable standard of living under a mixed system of high-tech capitalism and extensive welfare benefits. It has essentially full employment, a modern distribution system, excellent internal and external communications, and a skilled labor force. Timber, hydropower, and iron ore constitute the resource base of an economy that is heavily oriented toward foreign trade. Privately owned firms account for about 90% of industrial output, of which the engineering
sector accounts for 50% of output and exports. For some observers, the Swedish model has succeeded in making economic efficiency and social egalitarianism complementary, rather than competitive, goals. Others argue that the Swedish model is on the verge of collapsing by pointing to the serious economic problems Sweden faces in 1991: high inflation and absenteeism, growing unemployment and deficits, and declining international competitiveness. In 1990, to improve the economy, the government approved a mandate for Sweden to seek EC membership and an austerity and privatization package and implemented a major tax reform. These reforms may succeed in turning the economy around in 1992.

Economy

Overview: Switzerland's economic success is matched in few, if any, other nations. Per capita output, general living standards, education and science, health care, and diet are unsurpassed in Europe. Inflation remains low because of sound government policy and harmonious labor-management relations. Unemployment is negligible, a marked contrast to the larger economies of Western Europe. This economic stability helps promote the important banking and tourist sectors. Since World War II, Switzerland's economy has adjusted smoothly to the great changes in output and trade patterns in Europe and presumably can adjust to the challenges of the 1990s, in particular, the further economic integration of Western Europe and the amazingly rapid changes in East
European political/economic prospects.

_Economy

_Overview: Syria's rigidly structured Bathist economy turned
out slightly more goods in 1990 than in 1983, when the population was 20% smaller. Economic difficulties are attributable, in part, to severe
drought in several recent years, costly but unsuccessful attempts
to match Israel's military strength, a falloff in Arab aid, and
insufficient foreign exchange earnings to buy needed inputs for industry
and agriculture. Socialist policy, embodied in a thicket of bureaucratic
regulations, in many instances has driven away or pushed underground the
mercantile and entrepreneurial spirit for which Syrian businessmen have
long been famous. Two bright spots: a sizable number of villagers have
benefited from land redistribution, electrification, and other rural
development programs; and a recent find of light crude oil has enabled
Syria to cut oil imports. A long-term concern is the additional drain of
upstream Euphrates water by Turkey when its vast dam and irrigation projects are completed toward the end of the 1990s. Output in 1990 rebounded from the very bad year of 1989, as agricultural production and oil revenues increased substantially.

_*_Economy

_#_Overview: Tanzania is one of the poorest countries in the world.
The economy is heavily dependent on agriculture, which accounts for about 47% of GDP, provides 85% of exports, and employs 90% of the work force. Industry accounts for 8% of GDP and is mainly limited to processing agricultural products and light consumer goods. The economic recovery program announced in mid-1986 has generated notable increases in agricultural production and financial support for the program by bilateral donors. The World Bank and the International Monetary Fund have increased the availability of imports and provided funds to rehabilitate Tanzania's deteriorated economic infrastructure.

Economy

Overview: Thailand, one of the more advanced developing countries in Asia, enjoyed a year of 9% growth in 1990, although down from the double-digit rates of 1987-89. The increasingly sophisticated manufacturing sector benefited from export-oriented investment, but the agricultural sector contracted 2%, primarily because of weaker demand in Thailand's major overseas markets for commodities such as rice. The trade deficit almost doubled in 1990, to $9 billion, but earnings from tourism ($4.7 billion), remittances, and net capital inflows helped keep the balance of payments in surplus. The government has followed fairly sound fiscal and monetary policies, aided by increased tax receipts from the fast-moving economy. In 1990 the government approved new projects--especially for telecommunications
and roads--needed to refurbish the country's now overtaxed infrastructure. Although growth in 1991 will slow further, Thailand's economic outlook remains good, assuming the continuation of prudent government policies in the wake of the 23 February 1991 military coup.

_Economy

Overview: The economy is heavily dependent on subsistence
agriculture, which accounts for about 35% of GDP and provides
employment for 78% of the labor force. Primary agricultural exports are cocoa, coffee, and cotton, which together account for about 30% of total export earnings. Togo is self-sufficient in basic foodstuffs when harvests are normal. In the industrial sector phosphate mining is by far the most important activity, with phosphate exports accounting for about 40% of total foreign exchange earnings. Togo serves as a regional commercial and trade center. The government actively encourages foreign investment.

**Economy**

Overview: Tokelau's small size, isolation, and lack of resources greatly restrain economic development and confine agriculture to the subsistence level. The people must rely on aid from New Zealand to maintain public services, annual aid being substantially greater than GDP. The principal sources of revenue come from sales of copra, postage stamps, souvenir coins, and handicrafts. Money is also remitted to families from relatives in New Zealand.

Economy

Overview: Trinidad and Tobago's petroleum-based economy began to emerge from a lengthy depression in 1990. The economy fell sharply through most of the 1980s, largely because of the decline in oil prices. This sector accounts for 80% of export earnings and more than 25% of GDP. The government, in response to the oil revenue loss, pursued a series of austerity measures that pushed the unemployment rate as high as 22% in 1988. The economy showed signs of recovery in 1990, however, helped along by rising oil prices. Agriculture employs only about 11% of the labor force and produces about 3% of GDP. Since this sector is small, it has been unable to absorb the large numbers of the unemployed. The government currently seeks to diversify its export base.

GDP: $4.05 billion, per capita $3,363; real growth rate - 3.7% (1989)

Inflation rate (consumer prices): 11.4% (1989)

Overview: The economy depends primarily on petroleum, phosphates,
tourism, and exports of light manufactures for continued growth.
Following two years of drought-induced economic decline, the economy
made a strong recovery in 1990 as a result of a bountiful harvest,
continued export growth, and higher domestic investment. Continued high inflation and unemployment have eroded popular support for the government, however, and forced Tunis to slow the pace of economic reform. Nonetheless, the government appears committed to implementing its IMF-supported structural adjustment program and to servicing its foreign debt.

_Economy

_Overview: The economic reforms that Turkey launched in 1980
continue to bring an impressive stream of benefits. The economy has grown
steadily since the early 1980s, with real growth in per capita GDP
increasing more than 6% annually. Agriculture remains the most important
economic sector, employing about 55% of the labor force, accounting for
almost 20% of GDP, and contributing about 20% to exports. Impressive
growth in recent years has not solved all of the economic problems facing
Turkey. Inflation and interest rates remain high, and a large budget
deficit will continue to provide difficulties for a country undergoing a
substantial transformation from a centrally controlled to a free market
economy. The government has launched a multimillion-dollar development
program in the southeastern region, which includes the building of a
dozen dams on the Tigris and Euphrates rivers to generate electric power
and irrigate large tracts of farmland. The planned tapping of huge
additional quantities of Euphrates water has raised serious concern in
the downstream riparian nations of Syria and Iraq.
GDP: $178.0 billion, per capita $3,100; real growth rate 7.6% (1990)

Inflation rate (consumer prices): 60.3% (1990)

Unemployment rate: 10.4% (1990 est.)

Budget: revenues $27.6 billion; expenditures $34.4 billion, including capital expenditures of $6.6 billion (1991)

Exports: $11.8 billion (f.o.b., 1989); commodities--industrial products 78%, crops and livestock products 20%; partners--FRG 18%, Italy 8%, Iraq 8%, US 8%, UK 5%, France 4%

Imports: $16.0 billion (f.o.b., 1989); commodities--crude oil, machinery, transport equipment, metals, pharmaceuticals, dyes, plastics, rubber, mineral fuels, fertilizers, chemicals;
partners--FRG 15%, US 11%, Iraq 10%, Italy 7%, France 6%, UK 5%

External debt: $42.8 billion (June 1990)

Industrial production: growth rate 5.9% (1989 est.); accounts for 32% of GDP

Economy
Overview: Tuvalu consists of a scattered group of nine coral atolls with poor soil. The country has no known mineral resources and few exports. Subsistence farming and fishing are the primary economic activities. The islands are too small and too remote for development of a tourist industry. Government revenues largely come from the sale of stamps and coins and worker remittances. Substantial income is received annually from an international trust fund established in 1987 by Australia, New Zealand, and the UK and supported also by Japan and South Korea.

Economy
Overview: Uganda has substantial natural resources, including fertile soils, regular rainfall, and sizable mineral deposits of copper and cobalt. The economy has been devastated by much political instability, mismanagement, and civil war since independence in 1962, keeping Uganda poor with a per capita income of about $300. (GDP remains below the levels of the early 1970s, as does industrial production.)
Agriculture is the most important sector of the economy, employing over 80% of the work force. Coffee is the major export crop and accounts for the bulk of export revenues. Since 1986 the government has acted to rehabilitate and stabilize the economy by undertaking currency reform, raising producer prices on export crops, increasing petroleum prices, and improving civil service wages. The policy changes are especially aimed at dampening inflation, which was running at over 300% in 1987, and boosting production and export earnings.

_Economy

_Overview: The UAE has an open economy with one of the world's highest incomes per capita outside the OECD nations. This wealth is based on oil and gas, and the fortunes of the economy fluctuate with the prices of those commodities. Since 1973, when petroleum prices shot up, the UAE has undergone a profound transformation from an impoverished region of small desert principalities to a modern state with a high standard of living. At present levels of production, crude oil reserves should last for over 100 years.

*Economy*

**Overview:** The UK is one of the world's great trading powers and financial centers, and its economy ranks among the four largest in Europe. The economy is essentially capitalistic with a generous admixture of social welfare programs and government ownership. Over the last decade the Thatcher government halted the expansion of welfare measures and promoted extensive reprivatization of the government economic sector. Agriculture is intensive, highly mechanized, and efficient by European standards, producing about 60% of food needs with only 1% of the labor force. Industry is a mixture of public and private enterprises, employing about 27% of the work force and generating 22% of GDP. The UK is an energy-rich nation with large coal, natural gas, and oil reserves; primary energy production accounts for 12% of GDP, one of the highest shares of any industrial nation. In mid-1990 the economy fell into recession after eight years of strong economic expansion, which had raised national output by one quarter. Britain's inflation rate, which has been consistently well above those of her major trading partners, is expected to decline in 1991. Between 1986 and 1990 unemployment fell from 11% to about 6%, but it is now rising rapidly because of the economic slowdown. As a major trading nation, the UK will continue to be greatly affected by world boom or recession, swings in the international oil market, productivity trends in domestic industry, and the terms on which the economic integration of Europe proceeds.

**GDP:** $858.3 billion, per capita $15,000; real growth rate 0.8%
Inflation rate (consumer prices): 9.3% (1990)

Economy

Overview: The US has the most powerful, diverse, and technologically advanced economy in the world, with a per capita GNP of $21,800, the largest among major industrial nations. In 1989 the economy enjoyed its seventh successive year of substantial growth, the longest in peacetime history. The expansion featured moderation in wage and consumer price increases and a steady reduction in unemployment to 5.2% of the labor force. In 1990, however, growth slowed to 1% because of a combination of factors, such as the worldwide increase in interest rates, Iraq's invasion of Kuwait in August, the subsequent spurt in oil prices, and a general decline in business and consumer confidence. Ongoing problems for the 1990s include inadequate investment in education and other economic infrastructure, rapidly rising medical costs, and sizable budget and
trade deficits.

Economy

Overview: The economy is slowly recovering from the deep recession of the early 1980s. In 1988 real GDP grew by only 0.5% and in 1989 by 1.5%. The recovery was led by growth in the agriculture and fishing sectors, agriculture alone contributing 20% to GDP, employing about 11% of the labor force, and generating a large proportion of export earnings. Raising livestock, particularly cattle and sheep, is the major agricultural activity. In 1990, despite healthy exports and an improved current account, domestic growth remained weak because of government concentration on the external sector, adverse weather conditions, and prolonged strikes. Bringing down high inflation, reducing a large fiscal deficit, and avoiding frequent strikes remain major economic problems for the government.

Economy

Overview: Petroleum is the cornerstone of the economy and accounted for 21% of GDP, 60% of central government revenues, and 81% of export earnings in 1989. President Perez introduced an economic readjustment program when he assumed office in February 1989. Lower tariffs and price supports, a free market exchange rate, and market-linked interest rates have thrown the economy into confusion, causing about an 8% decline in GDP in 1989, but the economy recovered part way in 1990.

Economy

Overview: This is a centrally planned, developing economy with extensive government ownership and control of productive facilities. The economy is primarily agricultural; the sector employs about 65% of the labor force and accounts for almost half of GNP. Rice is the staple crop; substantial amounts of maize, sorghum, cassava, and sweet potatoes are also grown. The government permits sale of surplus grain on the open market. Most of the mineral resources are located in the north, including coal, which is an important export item. Oil was discovered off the southern coast in 1986 with production reaching 54,000 b/d in 1990 and expected to increase in the years ahead. Following the end of the war in 1975, heavy-handed government measures undermined efforts at an efficient merger of the agricultural resources of the south and the industrial resources of the north. The economy remains heavily dependent on foreign aid and has received assistance from Communist countries, Sweden, and UN agencies. Inflation, although down from recent triple-digit levels, is still a major weakness and is
showing signs of accelerating upwards again. Per capita output is among the world's lowest. Since late 1986 the government has sponsored a broad reform program that seeks to turn more economic activity over to the private sector.

*Economy

Overview: The economy is limited to traditional subsistence
agriculture, with about 80% of the labor force earning its livelihood
from agriculture (coconuts and vegetables), livestock (mostly pigs),
and fishing. About 4% of the population is employed in government.
Revenues come from French Government subsidies, licensing of fishing
rights to Japan and South Korea, import taxes, and remittances from
expatriate workers in New Caledonia. Wallis and Futuna imports food,
fuel, clothing, machinery, and transport equipment, but its exports
are negligible, consisting of copra and handicrafts.

West Bank

Note: The war between Israel and the Arab states in June 1967 ended with Israel in control of the West Bank and the Gaza Strip, the Sinai, and the Golan Heights. As stated in the 1978 Camp David Accords and reaffirmed by President Reagan's 1 September 1982 peace initiative, the final status of the West Bank and the Gaza Strip, their relationship with their neighbors, and a peace treaty between Israel and Jordan are to be negotiated among the concerned parties. Camp David further specifies that these negotiations will resolve the respective boundaries. Pending the completion of this process, it is US policy that the final status of
the West Bank and the Gaza Strip has yet to be determined. In the view of the US, the term West Bank describes all of the area west of the Jordan River under Jordanian administration before the 1967 Arab-Israeli war. However, with respect to negotiations envisaged in the framework agreement, it is US policy that a distinction must be made between Jerusalem and the rest of the West Bank because of the city's special status and circumstances. Therefore, a negotiated solution for the final status of Jerusalem could be different in character from that of the rest of the West Bank.

Government

Long-form name: none

Note: The West Bank is currently governed by Israeli military authorities and Israeli civil administration. It is US policy that the final status of the West Bank will be determined by negotiations among the concerned parties. These negotiations will determine how the area is to be governed.

Economy

Overview: Economic progress in the West Bank has been hampered by Israeli military occupation and the effects of the Palestinian uprising. Industries using advanced technology or requiring sizable financial resources have been discouraged by a lack of financial resources and Israeli policy. Capital investment has largely gone into residential housing, not into productive assets that could compete with Israeli industry. A major share of GNP is derived from remittances of workers employed in Israel and neighboring Gulf states but remittances from the Gulf dropped dramatically in the wake of Iraq's invasion of Kuwait in
August 1990. Israeli reprisals against Palestinian unrest in the West Bank since 1987 have pushed unemployment up and lowered living standards.

The Persian Gulf crisis of 1990-91 also dealt a blow to the economy.

Many Palestinians returned from the Gulf, exacerbating unemployment.

Export revenues have plunged because of the loss of export markets in Jordan and the Gulf.

Economy
Overview: Agriculture employs more than half of the labor force,
contributes 50% to GDP, and furnishes 90% of exports. The bulk
of export earnings comes from the sale of coconut oil and copra. The
economy depends on emigrant remittances and foreign aid to support a
level of imports about five times export earnings. Tourism has become the
most important growth industry, and construction of the first
international hotel is under way.

GDP: $115 million, per capita $620; real growth rate - 4.5%
(1990 est.)
Inflation rate (consumer prices): 17% (1990 est.)

Unemployment rate: NA%; shortage of skilled labor

Budget: revenues $70 million; expenditures $73 million, including capital expenditures of $41 million (1990)

Exports: $9.4 million (f.o.b., 1990 est.);
commodities--coconut oil and cream 54%, taro 12%, copra 9%, cocoa 3%;
partners--NZ 28%, EC 23%, American Samoa 23%, Australia 11%, US 6% (1990)

Imports: $87 million (c.i.f., 1990 est.);
commodities--intermediate goods 58%, food 17%, capital goods 12%;
partners--New Zealand 31%, Australia 20%, Japan 15%, Fiji 15%, US 5%, EC 4% (1987)
External debt: $83 million (December 1990 est.)

Industrial production: growth rate - 4.3% (1990 est.); accounts for 14% of GDP

Electricity: 29,000 kW capacity; 45 million kWh produced, 240 kWh per capita (1990)

Industries: timber, tourism, food processing, fishing

Agriculture: accounts for 50% of GDP; coconuts, fruit (including bananas, taro, yams)

Overview: In 1990 the world economy grew at an estimated 1.0%, considerably lower than the estimated 3.0% for 1989 and the 3.4% for 1988. The technologically advanced areas--North America, Japan, and Western Europe--together account for 67% of the gross world product (GWP) of $20.9 trillion; these developed areas grew in the aggregate at 2.3% in 1990. In contrast, output in the USSR and Eastern Europe fell an average of 5.2%; these countries account for 15% of GWP. Experience in the developing countries continued mixed, with the newly industrializing economies generally maintaining their rapid growth, and many others struggling with debt, rampant inflation, and inadequate investment. This third group contributed 18% of GWP and grew on average 2.3% in 1990; output in this group is probably understated because of lack of data and the method of calculation used. The year 1990 witnessed continued political and economic upheavals in the USSR and Eastern Europe, which are in between systems, lacking both the rough discipline of the command economy and the institutions of the market economy. As for prospects in the 1990s, the addition of nearly 100 million people a year to an already overcrowded globe will exacerbate the problems of pollution, desertification, underemployment, epidemics, and famine.

GWP (gross world product): $20.9 trillion, per capita $3,930; real growth rate 1.0% (1990 est.)

Inflation rate (consumer prices): developed countries 5%;

Economy
Overview: Whereas the northern city Sanaa is the political
capital of a united Yemen, the southern city Aden, with its refinery
and port facilities, is the economic and commercial capital. Future
economic development depends heavily on Western-assisted development
of promising oil resources. South Yemen's willingness to merge stemmed
partly from the steady decline in Soviet economic support.
North--The low level of domestic industry and agriculture have made
northern Yemen dependent on imports for virtually all of its essential
needs. Large trade deficits have been made up for by remittances from
Yemenis working abroad and foreign aid. Once self-sufficient in food
production, northern Yemen has been a major importer. Land once used for
export crops--cotton, fruit, and vegetables--has been turned over to
growing qat, a mildly narcotic shrub chewed by Yemenis that has no
significant export market. Oil export revenues started flowing in late
1987 and boosted 1988 earnings by about $800 million.

South--This has been one of the poorest Arab countries, with a per
capita GNP of about $500. A shortage of natural resources, a widely
dispersed population, and an arid climate have made economic development
difficult. The economy has grown at an average annual rate of only 2-3%
since the mid-1970s. The economy had been organized along socialist
lines, dominated by the public sector. Economic growth has been
constrained by a lack of incentives, partly stemming from centralized
control over production decisions, investment allocation, and import
choices.

Economy
Overview: For 20 years Communist Yugoslavia had been trying to replace the Stalinist command economy with a decentralized semimarket system that features worker self-management councils in all large plants. This hybrid system neared collapse in late 1989 when inflation soared. The government applied shock therapy in 1990 under an IMF standby program that provides tight control over monetary expansion, a freeze on wages, the pegging of the dinar to the deutsche mark, and a partial price freeze on energy, transportation, and communal services. This program brought hyperinflation to a halt and encouraged a rise in foreign investment. Since June 1990, however, inflation has
rebounded and threatens to rise further in 1991. Estimated annual inflation for 1990 is 164%. Other huge problems remain: rising unemployment, the low quality of industrial output, and striking differences in income between the poorer southern regions and the comparatively well-off northern areas. Even so, political issues far outweigh economic problems in importance.

_economy

_overview: In 1990, in spite of large mineral resources and one of the most developed and diversified economies in Sub-Saharan Africa, Zaire had a GDP per capita of only about $200, one of the lowest on the continent. The country's chronic economic problems worsened in 1990, with copper production down 20% to a 20-year low, inflation near 250% compared with 100% in 1987-89, and IMF and most World Bank support suspended until the institution of agreed-on changes. Agriculture, a key sector of the economy, employs 75% of the population but generates under 25% of GDP. The main potential for economic development has been the extractive industries. Mining and mineral processing account for about one-third of GDP and two-thirds of total export earnings. Zaire is the world's largest producer of diamonds.

_#_Economy

_#_Overview: The economy has been in decline for more than a decade with falling imports and growing foreign debt. Economic difficulties
stem from a sustained drop in copper production and ineffective economic policies. In 1990 real GDP stood only slightly higher than that of 10 years before, while an annual population growth of more than 3% has brought a decline in per capita GDP of 25% during the same period. A high inflation rate has also added to Zambia's economic woes in recent years.

Metric Interrelationships

Conversions from a multiple or submultiple to the basic units of meters, liters, or grams can be done using the table. For example, to convert from kilometers to meters, multiply by 1,000 (9.26 kilometers equals 9,260 meters) or to convert from meters to kilometers, multiply by 0.001 (9,260 meters equals 9.26 kilometers)
